Data in many forms. . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer printouts, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to obtain more information

Inquiries about this publication and related statistics or services should be directed to the Statistics Canada reference centre in:

| St. John's | 772-4073 | Sturgeon Falls | 753-4888 |
|------------|----------|----------------|----------|
| Halifax | 426-5331 | Winnipeg | 949-4020 |
| Montréal | 283-5725 | Regina | 359-5405 |
| Ottawa | 992-4734 | Edmonton | 420-3027 |
| Toronto | 966-6586 | Vancouver | 666-3691 |

Toll-free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional reference centres:

| Newfoundland & Labrador | Zenith 07037 |
|--|----------------------|
| Nova Scotia, New Brunswick & Prince Edward Island | 1-800-565-7192 |
| Québec | 1-800-361-2831 |
| Ontario | 1-800-268-1151 |
| Manitoba | 1-800-282-8006 |
| Saskatchewan | 1 (112)-800-667-3524 |
| Alberta | 1-800-222-6400 |
| British Columbia (South & Central) | 112-800-663-1551 |
| Yukon & Northern B.C.(area served by NorthwesTel Inc.) | Zenith 08913 |
| Northwest Territories | Zenith 22015 |

How to order publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, Ontario, K1A 0V7.

Des données sous plusieurs formes. . .

Statistique Canada diffuse des données sous diverses formes. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms, et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toute demande de renseignements au sujet de cette publication ou de statistiques et services connexes doit être adressée aux centres de référence de Statistique Canada à:

| St. John's | 772-4073 | Sturgeon Falls | 753-4888 |
|------------|----------|----------------|----------|
| Halifax | 426-5331 | Winnipeg | 949-4020 |
| Montréal | 283-5725 | Regina | 359-5405 |
| Ottawa | 992-4734 | Edmonton | 420-3027 |
| Toronto | 966-6586 | Vancouver | 666-3691 |

Un service d'appel sans frais est offert, dans toutes les provinces et dans les territoires, aux utilisateurs qui habitent à l'extérieur des zones de communication locale des centres de référence régionaux:

| Terre-Neu | ve et Labrador | Zénith 07037 |
|-------------|---|-------------------------|
| | Écosse, Nouveau-Brun rince-Édouard | swick 1-800-565-7192 |
| Québec | | 1-800-361-2831 |
| Ontario | | 1-800-268-1151 |
| Manitoba | | 1-800-282-8006 |
| Saskatche | wan | 1 (112)-800-667-3524 |
| Alberta | | 1-800-222-6400 |

INTRODUCTION

This special 1981 Census bulletin is designed to present historically comparable tables for the 1971, 1976 and 1981 Census education data. A number of conceptual and methodological changes have taken place over this ten-year period. It is the purpose of this bulletin to take these changes into account, to the extent that it is feasible, and to display the census education data in a comparable time series. Although the details concerning these changes have been documented elsewhere, the following briefly summarizes the more salient items that were considered in presenting the 1971, 1976 and 1981 data in a common framework.

CONCEPTUAL CHANGES

The major conceptual change that has taken place in the census education variables relates to what in past censuses was denoted as postsecondary non-university schooling. In 1971 this concept was utilized for the first time in a census to include schooling taken since secondary other than university. As a sign of the relative importance of this measure, almost 2 million persons in Canada in 1971 reported this type of schooling. In 1976, the question and the concept underwent a slight change in the direction of a more explicit and precise determination of its meaning. It was called postsecondary non-university and related to all community colleges, institutes of technology, CEGEPs

INTRODUCTION

Ce bulletin spécial du recensement de 1981 présente les tableaux comparables des recensements de 1971, 1976 et 1981 portant sur l'éducation¹. Un certain nombre de chanqements conceptuels et méthodologiques se sont produits au cours de cette période de dix ans. Le présent bulletin vise donc à prendre en compte ces changements, dans la mesure du possible, et à exposer les données du recensement sur l'éducation dans une série de renseignement chronologiques comparables. Bien que ces changements aient été expliqués ailleurs², on trouvera ci-dessous un résumé des principaux critères qui ont servi à regrouper les données de 1971, 1976 et 1981 dans une base commune.

CHANGEMENTS CONCEPTUELS

Les principaux changements conceptuels qui sont survenus aux variables du recensement sur l'éducation touchent ce que l'on appelait, aux recensements antérieurs, les études postsecondaires non universitaires. Ce concept a été utilisé pour la première fois en 1971 afin de prendre en compte les études non universitaires effectuées depuis la fin du secondaire. Cette variable prend une importance assez grande puisque près de 2 millions de personnes ont déclaré ce genre d'études au recensement du Canada de 1971. En 1976, on a légèrement modifié le concept et la question en précisant davantage la signification de la variable. Elle s'appelait alors "études postsecondaires non universitaires" et pouvait s'appliquer à tous les collèges communautaires, instituts de technologie, cégeps

¹ Users interested in earlier census education data should consult the standard reference volumes from the censuses of 1961, 1951 and 1941. Prior to 1941, only "literacy" measures and school attendance data were collected.

² See the 1981 Census Dictionary (Catalogue No. 99-901) as well as the Summary Guide - Sample Population (Catalogue No. 99-903) and Data Quality - Sample Population (Catalogue No. 99-905).

¹ Les lecteurs intéressés à obtenir les données des recensements antérieurs sur l'éducation peuvent consulter les volumes types de référence des années 1961, 1951 et 1941. Avant 1941, les recensements n'ont recueilli que des données sur la fréquentation scolaire et l'alphabétisation.

Voir le <u>Dictionnaire du recensement de 1981 (nº 99-901 au cataloque) ainsi que le <u>Guide sommaire - Population-échantillon (nº 99-903 au cataloque) et Qualité des données - Population-échantillon (nº 99-905 au cataloque).</u></u>

13-579

(professional), etc. It did not, however, relate to university transfer courses of community colleges or the CEGEP (general) of Quebec. (These were counted in the university sector.) The number of persons reporting this type of schooling increased to $3\frac{1}{2}$ million in 1976. In 1981 the question underwent a further alteration, but this time in the direction of a closer approximation with 1971. The term postsecondary non-university was not used since analysis of the 1976 data showed a significant portion of non-secondary graduates. Furthermore, the 1981 question now included those with CEGEP (general) as well as those with only university transfer courses of community colleges. rationale for these two changes in 1981 was that the 1976 attempt to demarcate only actual postsecondary graduates, and only CEGEP (professional) students was only partially successful. The 1976 categories were thus not purely reflective of what they purported to measure. In 1981, the concept is now so defined that its literal definition matches its empirical content. With this somewhat broader definition, then, the 1981 estimate for what is now denoted as "other non-university education" was approximately 5 million persons.

To smooth out these conceptual changes over the last three censuses in order to arrive at a comparable data series, the tables in this bulletin utilize the 1971-1976 notion of "postsecondary", but this is done in a manner that combines both the non-university and the incomplete or the "proxy" university elements. This category is referred to in the tables of this bulletin as "some postsecondary". Table 1 contains footnotes that clearly define what the components of this category are, in each of the three censuses.

METHODOLOGICAL CHANGES

As far as methodological changes are concerned, there are two that specifically affected comparisons of 1981 education data with those of 1976 and 1971. The first change relates to the exclusion of inmates of institutions as part of the subpopulation answering the 1981 education questions. (The primary reason for this change was that the data previously collected contained high rates of imputation due to significant non-response

(enseignement professionnel), etc. La variable ne s'appliquait cependant pas aux cours préparatoires à l'université qui étaient dispensés par les collèges communautaires ou les cégeps (enseignement général) du Québec. (Ces cours ont été pris en compte dans le secteur universitaire.) En 1976, on a dénombré $3\frac{1}{2}$ millions de personnes qui ont déclaré ce genre d'études. En 1981, la question a de nouveau été changée, mais cette fois-ci, en se rapprochant plus du concept de 1971. L'expression "études postsecondaires non universitaires" n'a pas été utilisée puisque l'analyse des données de 1976 avait révélé qu'il existait un pourcentage important de diplômés hors du secteur secondaire. En outre, la question de 1981 prenait en compte les personnes qui avaient suivi le cours général de cégep ainsi que celles qui avaient uniquement suivi des cours préparatoires à l'université dans un collège communautaire. deux changements apportés en 1981 s'expliquent du fait que l'on n'avait pas réussi entièrement à faire une distinction nette en 1976 entre les diplômés d'études postsecondaires et les étudiants du cours professionnel des cégeps. Les catégories de 1976 n'ont donc pu prendre en compte tous les éléments que l'on se proposait d'observer. En 1981, le concept a été défini de façon que la définition littérale s'apparente au contenu empirique. Cette définition ainsi élargie, on a évalué à environ 5 millions le nombre de personnes qui ont suivi "d'autres études non universitaires" en 1981.

Pour en arriver à une série de données comparables pour les trois recensements en question, les tableaux du présent bulletin font appel à la notion de "postsecondaire" de 1971 et de 1976 mais d'une façon qui permette de regrouper les études non universitaires et les éléments incomplets ou "de substitution" du secteur universitaire. Cette catégorie fiqure dans le bulletin sous le titre "études postsecondaires partielles". On trouvera au tableau 1 les renvois qui définissent clairement les composantes de cette catégorie pour chacun des trois recensements.

CHANGEMENTS METHODOLOGIQUES

Du point de vue méthodologique, deux changements influent de façon particulière sur les comparaisons des données scolaires de 1981 avec celles de 1976 et 1971. Le premier changement a trait à l'exclusion des pensionnaires d'institution parmi la sous-population qui a répondu aux questions de 1981 sur l'éducation. (La raison principale de ce changement vient de ce qu'un pourcentage élevé des données recueillies antérieurement ont dû faire l'objet d'une imputation par suite d'un

- IX - 13-579

by this subpopulation.) The effect of this change is that census education data, which related to the entire population 15 years and over in 1976 and the entire population 5 years and over in 1971, is not reported for about 250,000 inmates 15 years and over in 1981. (In 1976, the corresponding counts for this inmate subpopulation was 215,000 and in 1971, 137,000.)

methodological The second change affecting numerical comparisons concerns the sampling and the weighting aspects of the three successive censuses. In 1971 and 1976, the sampling ratio was one-in-three and in 1981, it was one-in-five. change does not affect the magnitude of the counts, but rather their reliability. The smaller sample size in 1981 means that the variations due to sampling will be larger in 1981 compared to 1971 and 1976. In all three censuses, the sample counts were weighted (inflated) to produce estimates for the total population.

The tables in this bulletin account for the first methodological change in the following way. Both the 1971 and 1976 data relate only to the non-inmate population, as do the 1981 data. Therefore, it should be noted that the 1981 education figures in this bulletin will be comparable to those published in the regular bulletin series. However, the data for 1971 and 1976 in this bulletin will differ from previously published figures. In brief, the data herein represent a three point census time series reported for a conceptually standard subpopulation, namely, the non-inmate population, 15 years of age and over.

It should also be emphasized that all of the tables, with the exception of Table 13, have been compiled so that they relate to the non-inmate population 15 years of age and over. Users familiar with the 1971 Census education publications will note that many of the 1971 tables contained data for the population 5 years of age and over, thus prohibiting comparisons with 1976 and 1981. The tables in this bulletin have comparable age groups for each of the three census years.

taux important de non-réponse dans le sous-univers.) Pour 1981, ce changement a entraîné l'exclusion d'environ 250,000 pensionnaires de 15 ans et plus tandis que pour le recensement de 1976, les données sur l'éducation concernaient toute la population de 15 ans et plus et, en 1971, toute la population de 5 ans et plus. (En 1976 et en 1971, on avait dénombré respectivement 215,000 et 137,000 pensionnaires.)

Le second changement d'ordre méthodologique porte sur l'échantillonnage et la pondération de ces trois recensements. En 1971 et en 1976, la fraction de sondage était de un sur trois alors qu'en 1981, elle passait à un sur cinq. Cette modification n'influe pas sur les chiffres eux-mêmes mais plutôt sur leur fiabilité. En effet, la réduction d'échantillon en 1981 signifie que les variations attribuables à l'échantillonnage seront plus importantes que celles de 1971 et 1976. Pour les trois recensements, les données-échantillon ont été pondérées (gonflées) afin de produire des estimations représentatives de toute la population.

Les tableaux du présent bulletin tiennent compte du premier changement méthodologique de la façon suivante. Les données de 1971 et de 1976 concernent uniquement la population hors institution, tout comme celles de 1981. conséquent, il convient de souligner que les chiffres de 1981 présentés ici s'apparenteront à ceux qui ont paru dans la série régulière des bulletins. Cependant, les données pour 1971 et 1976 qui figurent ici s'écarteront de celles qui ont été diffusées dans les bulletins antérieurs. résumé, les données paraissant représentent une série chronologique articulée sur trois recensements différents et portant sur sous-population normalisée, plus particulièrement la population hors institution de 15 ans et plus.

Il convient également de remarquer que tous les tableaux, à l'exception du tableau 13, ont été dressés de façon à s'attacher uniquement à la population hors institution de 15 ans et plus. Les lecteurs qui connaissent les publications du recensement de 1971 sur l'éducation auront noté que bon nombre des tableaux de 1971 présentaient des données pour la population de cinq ans et plus, ce qui empêchait toute comparaison avec les chiffres de 1976 et 1981. Les tableaux du présent bulletin renferment des groupes d'âge comparables pour chacune des trois années de recensement.

TABLES 3

1 shows the numerical percentage distribution of the non-inmate population 15 years and over according to an overall measure of highest level of schooling. The data are reported for Canada and the provinces cross-classified by age groups and sex. This measure is generally comparable across the three census time points, 1971, 1976 and 1981. The "some postsecondary" element of this variable has undergone conceptual changes over the three censuses, as explained in the introduction. To be more specific the conceptual bases of the "postsecondary" measure underwent the following changes. In 1971, the non-university part of the measure referred to years of schooling attended since secondary school other than university. It should be noted that the "some postsecondary" designation refers also to persons with some university schooling but who had not obtained a degree. In 1976, the phrase "years of postsecondary non-university completed" was explicitly utilized on the questionnaire and the instructions for this question defined the term as training institutions which required a secondary school certificate or equivalent for entrance. However, in the example part of the question both the technical and the vocational aspects of community college are mentioned. For the most part it would appear that a sizeable portion (about one in five) of postsecondary non-university respondents followed the example rather than the instruction. This outcome turned out to be favourable since it made it possible to situate this schooling component in the 1971-1976-1981 time series. The 1981 concept resembles the 1976 measure in that it refers to completed years of schooling, and also approximates the 1971 term by defining it as a residual "other" category. In addition, in 1981, the examples used to instruct respondents included private trade schools and private business' colleges which may have been implicit in the 1971 measures at least.

TABLEAUX 3

Le tableau 1 présente la répartition absolue et en pourcentage de la population hors institution de 15 ans et plus en fonction d'une mesure globale identifiée comme le plus haut niveau de scolarité. Les données figurent pour le Canada et les provinces avec recoupements par groupe d'âge et sexe. Cette mesure est comparable en général pour les trois recensements de 1971, 1976 et 1981. Comme nous l'avons expliqué dans l'introduction, l'élément "études postsecondaires partielles" de cette variable a subi des changements conceptuels au cours des trois recensements en question. Pour être plus précis, le fondement conceptuel de l'expression "études postsecondaires" a été modifié comme suit. En 1971, les études non universitaires les années d'études non désignaient depuis l'école universitaires terminées secondaire. Il convient aussi de noter que l'expression "études postsecondaires partielles" s'applique également aux personnes qui ont suivi des études universitaires partielles sans obtenir de grade. En 1976, l'expression "années d'études postsecondaires non universitaires terminées" a été utilisée comme telle sur le questionnaire et les instructions relatives à cette question la désignait comme toute formation reçue dans un établissement qui exigeait comme condition d'entrée un certificat d'études secondaires ou l'équivalent. Cependant, l'exemple mentionné dans la question précisait à la fois les études techniques et professionnelles des collèges communautaires. Il semble qu'une bonne partie (un sur cinq) des répondants ayant suivi des études postsecondaires non universitaires se soient reportés à l'exemple plutôt qu'au guide d'instructions. Cette situation nous a toutefois permis de situer ce genre de scolarité dans la série chronologique de 1971, 1976 et 1981. Le concept de 1981 ressemble à celui de 1976 par la mention des années d'études terminées et également à celui de 1971 par l'inclusion de cet élément dans la catégorie résiduelle "autre". En outre, les exemples utilisés en 1981 à l'intention des répondants mentionnaient les cours suivis dans les écoles de métiers privées et les collèges commerciaux privés, ce que les chiffres de 1971 ont pu du moins donner de façon explicite.

It should be noted that all of the data for 1971, 1976 and 1981 exclude inmates of institutions. This applies to all thirteen tables.

Il est à noter que toutes les données de 1971, 1976 et 1981 excluent les pensionnaires d'institution. Cette exclusion s'applique aux treize tableaux de cette publication.

- XI - 13-579

For the three remaining categories in this measure (i.e. Less than Grade 9, Grades 9-13 and University Degree) there has been very little conceptual variation. Therefore, the counts and the proportions shown in Table 1 generally indicate a fairly reliable trend over the three censuses.

Table 2. This table expands the university degree category in Table 1 by disaggregating the degree category into bachelor or equivalent and master's or earned doctorate. In addition, a category not shown in Table 1, is shown here, i.e. university certificate below the bachelor level. In order to present comparable data over the three censuses, the categories form the baseline: 1976 combines bachelor and medical (as bachelor) and 1981 combines bachelor, medical and university certificate above the bachelor (as bachelor).

Table 3. This table displays the years of other non-university education variable disaggregated by highest grade of elementary-secondary and trades/vocational certificate for the years 1971 and 1981. The 1976 data are not shown since they do not include university transfer courses of community colleges or the CEGEP (general). Furthermore the other certificate or diploma component of this variable is not shown since this item of information was available only in 1981. therefore be emphasized It should that the emphasized trades/vocational component refers to only a portion of the total possible non-university certificates available from other non-university institutions. other words, the category "without trades/vocational certificate" includes persons who may or may not have other non-university qualifications. addition, the concepts of vocational and trades certificates in 1971 in certificates 1981 are interchangeable, although there is expected to be a considerable degree of overlap not only between the trades/vocational concepts but also for the 1971 and 1981 versions of other non-university education.

Table 4. This table shows 1971 and 1981 median years of schooling figures for a broad range of selected social characteristics: marital status, fertility, religion and official language.

Pour les trois autres catégories (c'est-à-dire n'ayant pas atteint la 9e année, 9-13e année et grade universitaire), les concepts n'ont presque pas changé. Aussi, les chiffres et les pourcentages figurant au tableau 1 indiquent de façon générale une tendance raisonnablement fiable pour les trois recensements.

Tableau 2. Ce tableau désagrège la catégorie "grade universitaire" du tableau 1 de la façon suivante: baccalauréat ou équivalent, et maîtrise ou doctorat acquis. En outre, ce tableau présente une catégorie supplémentaire soit celle du certificat universitaire inférieur au baccalauréat. Afin de pouvoir présenter des données comparables pour les trois recensements, les catégories de 1971 ont servi comme point de départ; celles de 1976 regroupent les détenteurs de baccalauréats et de diplômes en médecine (sous baccalauréats) alors que les catégories de 1981 regroupent les baccalauréats, les diplômes en médecine et les certificats universitaires supérieurs au baccalauréat (sous baccalauréats).

Tableau 3. Ce tableau présente les années d'autres études non universitaires selon la dernière année d'études primaires-secondaires ainsi que les certificats d'écoles de métiers et de formation professionnelle pour les années 1971 et 1981. Les données pour 1976 ne figurent pas puisqu'elles ne comprennent pas les cours préparatoires aux études universitaires dispensés par les collèges communautaires ni les cours d'enseignement général des cégeps. De plus, les "autres certificats ou diplômes" de cette variable ne sont pas donnés puisque ces renseignements n'ont été recueillis qu'à partir de 1981. Il convient donc de souligner que l'élément "école de métiers/formation professionnelle" s'applique uniquement à une partie de tous les certificats possibles de niveau non universitaire obtenus d'autres établissements non universitaires. En d'autres mots, la catégorie "sans certificat d'une école de métiers/formation professionnelle" comprend les personnes peuvent ou non posséder d'autres titres universitaires. De plus, les concepts de certificat de formation professionnelle en 1971 et de certificat d'écoles de métiers en 1981 ne sont pas interchangeables même si l'on s'attend à ce qu'il y ait un chevauchement important non seulement entre les concepts écoles métiers/formation professionnelle mais également entre les versions des "autres études non universitaires" de 1971 et de 1981.

<u>Tableau 4.</u> Ce tableau présente le nombre médian d'années d'études en 1971 et en 1981 pour une vaste gamme de certaines caractéristiques sociales: état matrimonial, fécondité, religion et langue officielle.

- <u>Table 5.</u> This table shows the 1971 and 1981 median years of schooling figures by selected age groups (15-24, 25-44, and 45-64 for 1971 and 1981) for place of birth and period of immigration.
- <u>Table 6.</u> This table shows 1971 and 1981 median years of schooling by age groups for mobility status. The figures are disaggregated into three broad age groups, 15-24 years, 25-44 years and 45-64 years.
- <u>Table 7.</u> This table shows, for persons in and not in the labour force, the trend in the aggregated statistic representing median years of schooling. The labour force definition used is that of the 1971 Census.
- Table 8. The data in table 8 refers to the percentage of the labour force in the population 15 years and over. It shows the 1971, 1976 and 1981 participation rate by highest level of schooling, age groups and sex. The labour force definition used is that of the 1971 Census.
- <u>Table 9.</u> This table displays average income figures (in constant 1980 dollars) for 1970 and 1980 according to general categories of highest level of schooling. The figures are disaggregated into two broad age groups, 25-44 years and 45-64 years.
- Table 10. This table shows 1971 and 1981 median years of schooling figures for the labour force defined as in 1971, by major occupation groups defined in terms of the 1971 occupational code structure. The figures are disaggregated into two broad age groups, 25-44 years and 45-64 years.
- Table 11. This table shows 1971 and 1981 median years of schooling figures for the labour force defined as in 1971, by industry divisions defined in terms of the 1971 industry code structures. The figures are again disaggregated into 25-44 and 45-64 age groups.
- <u>Table 12.</u> This table shows 1971 and 1981 median years of schooling figures according to work activity for various age groups.
- Table 13. The data shown in Table 13 refer to the population 20 years and over. The main reason for selecting this cut-off point was the response error which occurred in the 1976 Census for the school attendance variable. This error was

- Tableau 5. Ce tableau donne le nombre médian d'années d'études en 1971 et en 1981 selon certains groupes d'âge (15 à 24, 25 à 44, et 45 à 64 pour 1971 et 1981) pour le lieu de naissance et la période d'immigration.
- Tableau 6. Ce tableau présente le nombre médian d'années d'études en 1971 et en 1981 selon le groupe d'âge pour la variable de la mobilité. Les chiffres sont désagrégés en trois grands groupes d'âge soit ceux de 15 à 24 ans, 25 à 44 ans et 45 à 64 ans.
- <u>Tableau</u> 7. Ce tableau présente, pour les personnes actives et inactives, la tendance des statistiques agrégées représentant le nombre médian d'années d'études. La définition de la population active est celle du recensement de 1971.
- Tableau 8. Les données du tableau 8 se rapportent à la proportion de personnes actives dans la population de 15 ans et plus. On y donne le taux d'activité en 1971, 1976 et 1981 selon le plus haut niveau de scolarité, le groupe d'âge et le sexe. La définition de la population active est celle du recensement de 1971.
- Tableau 9. Ce tableau présente le revenu moyen (en dollars constants de 1980) en 1971 et 1981 selon les catégories générales du plus haut niveau de scolarité. Les chiffres sont désagrégés en deux groupes d'âge, celui de 25 à 44 ans et celui de 45 à 64 ans.
- <u>Tableau</u> 10. Ce tableau illustre le nombre médian d'années d'études de la population active (définition de 1971) en 1971 et 1981 pour les principales catégories de profession, celles-ci étant définies par les codes de profession de 1971. Les chiffres sont désagrégés en deux groupes d'âge, celui de 25 à 44 ans et celui de 45 à 64 ans.
- Tableau 11. Ce tableau donne le nombre médian d'années d'études en 1971 et en 1981 de la population active (définition de 1971) selon les divisions d'activité économique figurant dans la classification de 1971. Ici encore, les chiffres sont désagrégés en deux groupes d'âge, celui de 25 à 44 ans et celui de 45 à 64 ans.
- <u>Tableau</u> 12. Ce tableau présente le nombre médian d'années d'études en 1971 et en 1981 selon le travail pour divers groupes d'âge.
- <u>Tableau</u> 13. Les données du tableau 13 concernent la population de 20 ans et plus. La principale raison qui nous a poussé à choisir cet âge limite vient de l'erreur de réponse qui s'est produite au recensement de 1976 dans la variable

- XIII - 13-579

concentrated in the 15-19 year age group and affected those attending elementary or secondary school. Generally speaking the attendance figures for the adult population, and in particular the part-time attendance component, reflect a reliable time series. Notwithstanding the response error in 1976, the conceptual basis of school attendance has remained the same over the three censuses. In brief, attendance referred to either full-time or part-time schooling activity during the period between September and May. It should be noted that this excludes much if not all of summer school attendance.

The data in Table 13 are disaggregated according to whether the person was either in or out of the labour force. The labour force activity measure is based on the 1971 definition (see 1981 Census Dictionary, Catalogue No. 99-901, Appendix B-2). For further information concerning this bulletin see Special Note on Comparability of Labour Force Activity Data.

"fréquentation scolaire". En effet, cette erreur a surtout été concentrée dans le groupe 15 à 19 ans, plus particulièrement chez les répondants qui avaient fréquenté une école primaire ou secondaire. De façon générale, les chiffres de fréquentation de la population adulte, et en particulier les données sur la fréquentation à partiel, constituent une série chronologique fiable. Si l'on ne tient pas compte de l'erreur de réponse en 1976, le concept fondamental de la fréquentation scolaire est demeuré inchangé pour les trois recensements. En deux mots, la fréquentation désignait toute activité scolaire à plein ou à temps partiel entre septembre et mai. Il convient de souligner que cette définition exclut la plupart, sinon la totalité, des cours d'été.

Les données du tableau 13 sont désagrégées selon l'activité ou l'inactivité des recensés. L'activité sur le marché du travail est basée sur la définition de 1971 (voir le <u>Dictionnaire du recensement de 1981</u>, n^o 99-901 au cataloque, annexe B-2). Pour de plus amples détails au sujet de ce bulletin, voir la note spéciale concernant la comparabilité des données sur l'activité.

DEFINITIONS

Age. Refers to age at last birthday (as of the census reference date). This variable is derived from date of birth.

Average Income. The average income refers to the weighted mean total income of individuals 15 years and over who reported income for 1980. Average income is calculated from unrounded data by dividing the aggregate income of a group of individuals (e.g., males, 45-54 years) by the number of individuals with income in that group.

Constant (1980) Dollars Income. In Table 9, the 1970 income size distributions are presented in terms of 1980 dollars. To convert the 1970 incomes into 1980 dollars, the 1970 values were revised upwards by the change in the Consumer Price Index between 1970 and 1980.

Fertility. Refers to the number of children ever born alive to ever-married women aged 15 years and over.

Full-time or Part-time Weeks Worked in 1970/1980. Refers to persons 15 years of age and over, excluding inmates, who worked in 1970/1980, who were asked to report whether most of the number of weeks they reported worked in 1970/1980 were full weeks of work or weeks in which they worked only part of the week. Persons with a part-time job for part of the year and a full-time job for another part of the year were to report the information for the job at which they worked the most weeks.

Highest Degree, Certificate or Diploma. Refers to the highest degree, certificate or diploma obtained.

In 1976, "trades certificate or diploma" and "university certificate or diploma above bachelor level" were not included.

In 1971, this question related only to university degrees, certificates or diplomas.

Highest Grade of Elementary or Secondary. Refers to the highest grade or year of elementary or secondary school attended according to the province where the education was obtained, or according to the province of residence in the event this education was received outside of Canada.

Highest Level of Schooling. Refers to the highest grade or year of elementary or secondary school attended, or the highest year of university or other non-university completed. University education is considered to be above other non-university. Also, the attainment of a degree, certificate or diploma is considered to be at a higher level than years completed or attended without an educational qualification.

DÉFINITIONS

Âge. Âge au dernier anniversaire de naissance (à la date de référence du recensement). Cette variable est établie d'après la réponse à la question sur la date de naissance.

Revenu moyen. Revenu total moyen pondéré des personnes de 15 ans et plus qui ont déclaré un revenu d'emploi pour 1980. Pour établir le revenu moyen à partir de données non arrondies, on divise le revenu agrégé du groupe (par exemple hommes 45-54 ans) par le nombre de particuliers dans ce groupe qui touchent un revenu.

Revenu en dollars constants (1980). Au tableau 9, les répartitions de la taille du revenu de 1970 sont présentées en dollars de 1980. Pour transformer les revenus de 1970 en dollars de 1980, on a rectifié à la hausse les chiffres de 1970 selon la variation survenue dans l'indice des prix à la consommation entre 1970 et 1980.

Fécondité. Nombre d'enfants nés vivants de femmes non célibataires âgées de 15 ans et plus.

Semaines travaillées, à plein temps ou à temps partiel, en 1970/1980. Les personnes de 15 ans et plus, à l'exclusion des pensionnaires d'institution, qui ont travaillé en 1970/1980 devaient préciser si elles avaient travaillé surtout à plein temps ou à temps partiel. Les personnes qui avaient un emploi à temps partiel pendant une partie de l'année et un emploi à plein temps pendant l'autre partie devaient répondre en fonction de l'emploi qu'elles avaient occupé pendant le plus grand nombre de semaines.

Plus haut grade, certificat ou diplôme. Plus haut grade, certificat ou diplôme obtenu.

En 1976, les "certificats ou diplômes d'écoles de métiers" et les "certificats ou diplômes d'études universitaires supérieurs au baccalauréat" n'ont pas été pris en compte.

En 1971, la question portait uniquement sur les grades, certificats ou diplômes d'études universitaires.

Plus haut niveau atteint à l'école primaire ou secondaire. Dernière année d'études primaires ou secondaires terminée ou non, selon la province où l'enseignement a été reçu ou, dans le cas des personnes qui ont fait leurs études primaires ou secondaires à l'extérieur du Canada, l'équivalent du niveau de scolarité atteint selon le système scolaire en usage dans leur province de résidence.

Plus haut niveau de scolarité atteint. Dernière année d'études terminée ou non au niveau primaire et secondaire, ou dernière année universitaire ou non universitaire terminée. Dans la hiérarchie de la scolarité, les études universitaires sont classées audessus de la catégorie "autres études non universitaires". En outre, la personne qui a obtenu un diplôme se trouve classée à un échelon au-dessus de celle qui a une scolarité plus élevée mais qui n'a pas de titre scolaire.

In 1971 and 1976, this variable was denoted as "level of schooling". In 1971, it was defined as "the highest grade or year of elementary, secondary school or university ever attended and whether or not additional training in the form of vocational or postsecondary non-university was present". In 1976, the definition was slightly revised to emphasize completion (rather than attendance) beyond the secondary level: "Level of schooling refers to the highest grade or year of elementary/secondary attended, or the highest year of postsecondary non-university or university completed by the person".

Industry. Refers to the general nature of the business carried out in the establishment where the person (population 15 years and over, excluding inmates) worked, as indicated by the reporting of the name of the person's employer (or the person's own business name if self-employed) and the kind of business, industry or service engaged in by this establishment. If not employed in the week prior to enumeration, the information was to relate to the person's job of longest duration since January 1, 1970/1980. Persons with two or more jobs were to report the information for the job at which they worked the most hours.

Classification: The industry classification is based on the 1970 Standard Industrial Classification (SIC) Manual. This is a systematic and comprehensive arrangement of industry classes arranged into Divisions, Major Groups and Classes. An industry class is coded to the three-digit level. These industrial classes are based on the general nature of the business, industry or service engaged in by the establishment. For further information on the Standard Industrial classification, see Classification Manual, 1970, Catalogue No. 12-501. One additional class, 005, "Farm Type Unknown" was used in the census and class 715, "Canadian Offices of Canadian-Incorporated Companies Classified as Non-Canadian", was combined with class 707, "Investment and Holding Companies". Class 999 was not used.

Labour Force Activity. Refers to the labour market activity of the population 15 years of age and over, excluding inmates, who, in the week prior to enumeration (June 1 in 1971 and 1976, and June 3 in 1981) were Employed, Unemployed or Not in labour force.

Labour Force, Total (in Reference Week)

Refers to the population 15 years of age and over, excluding inmates, who were either employed or unemployed during the week prior to enumeration (June 1 in 1971 and 1976, and June 3 in 1981).

For this bulletin all data shown are based on the 1971 definition.

En 1971 et 1976, cette variable était appelée "niveau de scolarité". En 1971, elle était définie comme la dernière année d'études primaires, secondaires ou universitaires terminée ou non, peu importe que les personnes aient reçu ou non une formation professionnelle ou postsecondaire non universitaire. En 1976, cette définition a été révisée de manière à insister sur le nombre d'années terminées au-delà du niveau secondaire. Elle se lisait comme suit: "Dernière année d'études primaires/secondaires ou dernière année d'études postsecondaires non universitaires ou universitaires achevée par le recensé".

Activité économique. Nature générale de l'activité de l'établissement où travaille le recensé (personne de 15 ans et plus non pensionnaire d'institution), qui peut être déterminée d'après le nom de l'employeur (ou le nom de l'entreprise du recensé, s'il travaillait à son compte) et d'après le genre d'entreprise, d'industrie ou de service que constitue l'établissement. Si le recensé n'avait pas d'emploi au cours de la semaine précédant le recensement, il devait donner des renseignements sur l'emploi qu'il avait occupé le plus longtemps depuis le ler janvier 1970/1980. Les personnes qui avaient deux emplois ou plus devaient fournir des renseignements sur celui auquel elles avaient consacré le plus grand nombre d'heures de travail.

Classification: Les catégories d'activité économique sont fondées sur la Classification des activités économiques de 1970, document qui présente un classement systématique et détaillé des activités économiques par divisions, groupes et classes. Ces dernières sont désignées par un code à trois chiffres et elles décrivent la nature générale de l'activité de l'entreprise, de l'industrie ou du service que constitue l'établissement. Pour de plus amples renseignements sur cette classification, voir la Classification des activités économiques de 1970, nº 12-501 au catalogue. Une classe supplémentaire a été utilisée, 005 "Fermes, genre inconnu" et la classe 715 "Bureaux canadiens de sociétés constituées au Canada considérées comme non canadiennes" a été jumelée à la classe 707 "Sociétés d'investissement et sociétés à portefeuille". La classe 999 n'a pas été utilisée.

Activité. Activité sur le marché du travail des personnes de 15 ans et plus, à l'exclusion des pensionnaires d'institution, qui, au cours de la semaine précédant le jour du recensement (le 1er juin 1971, le 1er juin 1976, le 3 juin 1981), faisaient partie de la population active occupée ou de la population active en chômage ou inactifs.

Population active totale (pendant la semaine de référence)

Personnes de 15 ans et plus, à l'exclusion des pensionnaires d'institution, qui étaient soit occupées soit en chômage pendant la semaine précédant le recensement (le ler juin 1971, le ler juin 1976, le 3 juin 1981).

Pour ce bulletin, toutes les données présentées sont basées sur la définition de 1971.

The Employed includes those persons who, during the week prior to enumeration:

- (a) did any work at all; or
- (b) were absent from their jobs or businesses because of own temporary illness or disability, vacation, labour dispute at their place of work, or were absent for other reasons.

The Unemployed includes those persons who, during the week prior to enumeration:

- (a) were without work and had actively looked for work; or
- (b) had been on lay-off from a job to which they expected to return.

Not in the Labour Force

The Not in Labour Force classification refers to those persons, who, in the week prior to enumeration, were unwilling or unable to offer or supply their labour services under conditions existing in their labour markets. It includes persons who did not work, have a job, or look for work in the week(s) prior to enumeration.

Participation Rate

Refers to the percentage the total labour force (in the reference week) forms of the total population 15 years of age and over, excluding inmates, in an area, group or category.

Labour Force, Experienced. Derived by deleting from the total labour force unemployed persons 15 years of age and over who had never worked or who had worked only prior to January 1, 1970/1980.

Marital Status. Refers to the following conjugal status of a person:

Now married (excluding separated) -Persons whose husband or wife is living, unless the couple is separated or a divorce has been obtained. Persons living common-law are considered as "Now married" (1976 and 1981). A specific instruction regarding common-law was incorporated in the instructions to respondents in 1976 and 1981. instructions for the 1971 data were given only to the census staff, including, in particular, the Census Representatives (CRs) and the Telephone Assistance Service (TAS) personnel. One may assume that a sizeable number of persons living common-law who were reported as "now married" in 1976 and 1981 were reported otherwise in 1971;

La catégorie des personnes occupées comprend toutes les personnes qui, au cours de la semaine précédant le recensement:

- a) avaient fait un travail quelconque; ou
- étaient temporairement absentes de leur travail à cause d'un conflit de travail, d'une maladie ou d'une incapacité temporaire, de vacances, ou encore pour d'autres raisons.

La catégorie des personnes en chômage comprend toutes les personnes qui, pendant la semaine précédant le recensement:

- a) étaient sans travail et avaient cherché un emploi; ou
- b) s'attendaient à reprendre l'emploi dont elles avaient été mises à pied.

Inactifs

La catégorie des inactifs comprend les personnes qui, pendant la semaine précédant le recensement, ne voulaient pas ou ne pouvaient pas travailler compte tenu des conditions existant sur le marché du travail. Plus particulièrement, ce sont les personnes qui n'ont pas travaillé, n'avaient pas d'emploi et n'ont pas cherché de travail au cours de(s) (la) semaine(s) précédant le recensement.

Taux d'activité

Pourcentage de la population active totale (pendant la semaine de référence) par rapport à la population totale de 15 ans et plus, à l'exclusion des pensionnaires d'institution, dans un secteur, un groupe ou une catégorie.

Population active expérimentée. Variable obtenue en retranchant de la population active totale les chômeurs de 15 ans et plus qui n'ont jamais travaillé ou ont travaillé seulement avant le ler janvier 1970/1980.

État matrimonial. Situation conjugale d'une personne, notamment:

Actuellement marié(e) (sauf séparé(e)): personne dont le conjoint est vivant, à moins que le couple ne soit séparé ou divorcé; les personnes vivant en union consensuelle sont considérées comme actuellement mariées (1976 et 1981). En 1976 et 1981 on a ajouté une directive précise aux répondants concernant les unions libres. Seul le personnel du recensement avait reçu des directives semblables en 1971, en particulier les représentants du recensement et le personnel du service auxiliaire téléphonique (SAT). Par conséquent, il est probable qu'un grand nombre de personnes vivant en union libre qui, en 1976 et 1981, étaient déclarées comme "actuellement mariées", figuraient dans une autre catégorie en 1971.

Separated -

Persons who have been deserted or who have parted because they no longer want to live together, but have not obtained a divorce;

Divorced -

Persons who have obtained a legal divorce and who have not remarried;

Widowed -

Persons who have lost their spouse through death and who have not remarried;

Never married (single) -

Persons who never married (including all persons less than 15 years) and persons whose marriage was annulled.

Median Years of Schooling. Median years of schooling is a derived statistic based on total years of schooling which divides the population in question into two equal halves. Therefore, if the median is 11.8 years, then this means that half of the population has less than 11.8 years of schooling, and the other half more than 11.8 years. Total years of schooling, in turn, is an aggregate figure consisting of the sum of highest grade of elementary or secondary attended, years of other non-university education completed (1981) (or completed years of postsecondary non-university in 1971 and 1976) and years of university completed.

Mobility Status. Mobility status is based on the relationship between a person's usual place of residence on Census Day and his/her usual place of residence five years earlier. On the basis of this relationship, the population is classified as NON-MOVERS and MOVERS (MOBILITY STATUS). Within the category MOVERS, a further distinction is made between NON-MIGRANTS and MIGRANTS (MIGRATION STATUS).

NON-MOVERS are persons who, on Census Day, were living in the same dwelling they occupied five years earlier.

MOVERS are persons who, on Census Day, were living in a different dwelling than the one occupied five years earlier.

NON-MIGRANTS are movers who, on Census Day, were living within the same census subdivision (CSD) they resided in five years earlier.

MIGRANTS are movers who, on Census Day, were residing in a different CSD within Canada five years earlier (INTERNAL MIGRANTS) or who were living outside Canada five years earlier (EXTERNAL MIGRANTS).

Séparé(e):

personne qui a été abandonnée, ou qui est séparée de son conjoint, légalement ou non, parce qu'elle ne veut plus vivre avec cette personne, mais qui n'a pas obtenu de divorce.

Divorcé(e):

personne qui a obtenu un divorce et qui ne s'est pas remariée.

Veuf(ve):

personne dont le conjoint est décédé et qui ne s'est pas remariée.

Célibataire (jamais marié(e)):

personne qui n'a jamais été mariée (y compris toute personne de moins de 15 ans), ou personne dont le mariage a été annulé.

Nombre médian d'années de scolarité. Le nombre médian d'années de scolarité est une statistique dérivée basée sur le nombre total d'années de scolarité qui permet de diviser la population visée en deux parties égales. Par conséquent, si la médiane est de 11.8 années, cela signifie que la moitié de la population a moins de 11.8 années de scolarité, et l'autre moitié plus de 11.8 années. En outre, le nombre total d'années de scolarité représente la somme du plus haut niveau (années) atteint à l'école primaire ou secondaire (année), du nombre d'années d'autres études non universitaires (1981) (ou le nombre d'années postsecondaires non universitaires en 1971 et 1976) et du nombre d'années d'études universitaires.

Mobilité. La mobilité est déterminée d'après la réponse à la question concernant le domicile habituel d'une personne le jour du recensement et son domicile habituel cinq ans plus tôt. Cette question permet de classer la population en PERSONNES N'AYANT PAS DÉMÉNAGÉ et PERSONNES AYANT DÉMÉNAGÉ (MOBILITÉ). Les PERSONNES AYANT DÉMÉNAGÉ peuvent également être classées comme NON-MIGRANTS ou MIGRANTS (STATUT MIGRATOIRE).

Les PERSONNES N'AYANT PAS DÉMÉNAGÉ sont celles qui, le jour du recensement, demeuraient dans le même logement que celui qu'elles occupaient cinq ans plus tôt.

Les PERSONNES AYANT DÉMÉNAGÉ sont celles qui, le jour du recensement, demeuraient dans un logement différent de celui qu'elles occupaient cinq ans plus tôt.

Les NON-MIGRANTS sont des personnes ayant déménagé qui, le jour du recensement, demeuraient dans la même subdivision de recensement (SDR) que celle où elles résidaient cinq ans plus tôt.

Les MIGRANTS sont des personnes ayant déménagé qui, le jour du recensement, résidaient toujours au Canada mais dans une subdivision de recensement différente de celle où elles résidaient cinq ans plus tôt (MIGRANTS INTERNES) ou encore ce sont les personnes qui résidaient à l'extérieur du Canada cinq ans plus tôt (MIGRANTS EXTERNES).

With respect to EXTERNAL MIGRATION, IMMIGRANTS - persons who were residing outside Canada five years earlier but in Canada on Census Day - are counted. EMIGRANTS - persons residing in Canada five years ago but not on Census Day - are not counted.

With respect to INTERNAL MIGRATION, different TYPES OF MIGRATION are derived based on various aggregations of CSDs. CSD aggregations commonly used include Census Divisions (CDs), Provinces (including the Territories), Census Metropolitan Areas (CMAs) and Census Agglomerations (CAs) showing IN-MIGRATION, OUT-MIGRATION, NET INTERNAL MIGRATION and MIGRATION STREAMS.

In both 1971 and 1981, Canadian residents stationed outside Canada in the Armed Forces or the diplomatic service are excluded from the population universe from which mobility data are collected. Those aged 0-4 on Census Day are also excluded from all census mobility data as the five-year reference period precludes this segment of the population. Moreover, in 1981 inmates of institutions are excluded from the mobility universe.

Note: In 1971, since previous place of residence - a component of mobility status - was not imputed, a "not stated" category existed for this information.

Official Language. Refers to the ability to conduct a conversation in either of the official languages of Canada.

It should be noted that persons who gave an official language as home language are considered to be able to conduct a conversation in this language. A processing procedure was implemented to ensure this consistency. In 1971 and earlier censuses, it was also assumed that a person who reported English or French as mother tongue could also speak or conduct a conversation in that language. Processing procedures ensured this consistency. A similar edit was not implemented for 1981.

Occupation (Based on 1971 Classification). Refers to the kind of work persons 15 years of age and over, excluding inmates, were doing during the reference week, as determined by their reporting of their kind of work and the description of the most important duties of their job. If the person did not have a job during the week prior to enumeration, the data relate to the job of longest duration since January 1, 1970/1980. Persons with two or more jobs were to report the information for the job at which they worked the most hours.

En ce qui concerne la MIGRATION EXTERNE, on a pris en compte les IMMIGRANTS, c'est-à-dire les personnes qui vivaient à l'extérieur du Canada cinq ans avant le recensement, mais résidaient au Canada le jour du recensement. Par ailleurs, on n'a pas pris en compte les ÉMIGRANTS, c'est-à-dire les personnes qui résidaient au Canada cinq ans avant le recensement mais non le jour du recensement.

En ce qui a trait à la MIGRATION INTERNE, on a établi différents TYPES DE MIGRATION à partir de divers regroupements de SDR, dont les plus courants sont les divisions de recensement (DR), les provinces (y compris les Territoires), les régions métropolitaines de recensement (RMR) et les agglomérations de recensement (AR), qui font connaître l'IMMIGRATION INTERNE, l'ÉMIGRATION INTERNE, la MIGRATION INTERNE NETTE et les COURANTS MIGRATOIRES.

En 1971 et 1981, les diplomates et les citoyens canadiens au sein des Forces armées à l'étranger sont exclus de l'univers auprès duquel les données sur la mobilité sont recueillies. Les enfants âgés de 4 ans ou moins le jour du recensement sont également exclus de tous les données du recensement sur la mobilité en raison de la période de référence de cinq ans. De plus, en 1981 les pensionnaires d'institution ne font pas partie de l'univers de la mobilité.

Nota: En 1971, comme on n'imputait pas le lieu de résidence antérieur, qui est une composante de la mobilité, on avait établi la catégorie "non déclaré" pour tenir compte des personnes qui n'avaient pas répondu à cette question.

Langue officielle. Permet de déterminer la capacité des recensés de tenir une conversation dans l'une ou l'autre des langues officielles du Canada.

Il est à noter que les personnes qui ont déclaré l'une ou l'autre des langues officielles comme langue parlée à la maison sont considérées comme étant en mesure de tenir une conversation dans cette langue. On a appliqué une méthode de traitement particulière pour assurer cette compatibilité. En 1971 et aux recensements précédents, on a supposé également qu'une personne qui déclarait l'anglais ou le français comme langue maternelle était capable de tenir une conversation dans cette langue. On avait également mis au point des méthodes de traitement pour assurer cette compatibilité. Un contrôle semblable n'a pas été appliqué en 1981.

Profession (d'après la classification de 1971). Genre de travail que faisaient, pendant la semaine de référence, les personnes de 15 ans et plus, à l'exclusion des pensionnaires d'institution. Le genre de travail exécuté est défini à partir du type d'emploi déclaré par le recensé et de la description des tâches les plus importantes qui s'y rattachent. Si le recensé n'avait pas d'emploi au cours de la semaine précédant le recensement, les données portent sur l'emploi qu'il a occupé le plus longtemps depuis le 1er janvier 1970/1980. Les personnes qui avaient deux emplois ou plus devaient donner des renseignements sur l'emploi auquel elles avaient consacré le plus d'heures de travail.

Classification: The 1981 Occupation data were made directly comparable to that of 1971 during the coding operation by using a series of special codes and computer manipulations. Therefore, Occupation is shown on the 1981 Census data base according to the 1981 and 1971 classification basis.

As in 1981, the 1971 Occupational Classification used the "Kind of work performed" as a basis. The occupation titles were structured according to a three-tier classification: i.e., to the Major, Minor and Unit group level. Occupations were identified and grouped primarily in terms of the work performed, this being determined by the tasks, duties and responsibilities of the occupation. The Unit groups to which occupations are classified in this system were designed to have a "desired degree of homogeneity with respect to the kind of work performed".

For further information on the classification, including definitions of the individual Unit groups, see Occupational Classification Manual, Census of Canada, 1971, Volume I, Catalogue No. 12-536.

Period of Immigration. Refers to groupings of years derived from year of immigration reported by persons who are not Canadian citizens by birth.

Place of Birth. For persons born in Canada, place of birth refers to the specific province or territory of birth. For those born outside Canada, it refers to the specific country of birth according to boundaries at the census date.

Religion. Refers to specific religious groups or bodies, denominations, sects, cults or religious communities.

Respondents were instructed to report a specific denomination even if they were not necessarily active members of the denomination. For infants and young children, the religion to be reported was the one in which they were being brought up. In most cases, this would normally be the religion of their parent(s) or quardian(s). It should be emphasized that the census information on religion does not reflect actual membership, nor the degree of affiliation with, or commitment to, a given religious group. It should, therefore, be best interpreted in terms of stated identification with a specific religious group, body, sect, cult, community or individual belief system. The 1971 and 1981 religion data as shown in this bulletin are comparable for the religions indicated.

School Attendance. Refers to either full-time or part-time (day or evening) attendance at a school, college or university at any time between September of the previous year and Census Day.

Classification: Les données de 1981 sur la profession ont été rendues directement comparables à celles de 1971 grâce à l'utilisation de codes spéciaux et de manipulations informatiques. Par conséquent, les renseignements contenus dans la base de données du recensement de 1981 ont été établis à la fois en fonction de la classification de 1971 et de celle de 1981.

La classification de 1971, comme celle de 1981, est fondée sur le "genre de travail exécuté". Les titres des professions sont répartis en trois groupes: grand groupe, sous-groupe et groupe de base. Les diverses professions sont donc définies et classées principalement d'après le genre de travail exécuté, c'est-à-dire d'après les tâches, fonctions et responsabilités qui s'y rattachent. Les groupes de base, auxquels les diverses professions sont affectées, ont été établis de manière à assurer le plus d'uniformité possible en ce qui a trait au genre de travail exécuté.

Pour plus de renseignements sur la classification, notamment les définitions des groupes de base, voir la Classification des professions, recensement du Canada de 1971, vol. I, nº 12-536F au catalogue.

Période d'immigration. Tranches d'années établies d'après l'année d'immigration déclarée par les personnes qui ne sont pas citoyens canadiens de naissance.

Lieu de naissance. La province ou le territoire de naissance, pour les personnes nées au Canada, ou le pays de naissance, selon sa constitution territoriale au jour du recensement, pour les personnes nées à l'extérieur du Canada.

Religion. Organisme, confession, secte, communauté ou culte religieux.

Les recensés devaient déclarer leur confession religieuse même s'ils n'étaient pas pratiquants. Dans le cas des enfants en bas âge, il fallait indiquer la religion dans laquelle ils étaient élevés (en général, il s'agit de la religion des parents ou des tuteurs). Il importe de souligner que les données du recensement ne permettent pas de connaître le nombre de fidèles ni de mesurer la pratique religieuse. Par conséquent, les données indiquent uniquement l'adhésion des recensés à une religion, une secte, un culte, une communauté ou à un système de croyances. Les données de 1971 et 1981 sur la religion telles qu'elles apparaissent dans ce bulletin sont comparables pour les religions indiquées.

Fréquentation scolaire. Fréquentation à plein temps ou à temps partiel (jour ou soir) d'une école, d'un collège ou d'une université à un moment quelconque entre le mois de septembre de l'année précédente et le jour du recensement.

Attendance is considered to be full-time if the person was taking 75% or more of the normal course load in the grade or year in which the person is registered.

A significant response error bias in the 1976 school attendance data renders any comparisons for secondary school attendance, particularly in the 15-19 age group, inappropriate; however, 1976 data for university and postsecondary non-university attendance were not affected.

Sex. Refers to the gender of the respondent.

Total Income. Total income consists of money income received during the calendar year 1970/1980 by persons 15 years of age and over from one or more of the following sources: wages and salaries (before deductions for income tax, social security contributions, etc.), net income from farm or non-farm self-employment, investment income (bond and bank interests, dividends, rent, etc.), government transfer payments (old age pensions, family allowances, unemployment insurance benefits, etc.), private pensions and other miscellaneous income.

Trades and Other Non-university Certificates. A trades certificate is usually obtained through apprenticeship or journeyman's training over several years duration, in trade occupations such as welding, plumbing and carpentry; it may also be accompanied by periods of in-school training in community colleges or other such institutions. A non-university certificate or diploma is obtained from non-degree-granting institutions such as nursing schools, community colleges, CEGEPs, institutes of technology, private trade schools, or private business colleges.

In 1971, a special series of questions and data related to Apprenticeship and Vocational Training. The 1981 data for trades certificate are not directly comparable to the 1971 vocational course data which were defined as full-time courses of three months duration or longer. In addition, the 1971 data allowed for the distinction between apprenticeship and full-time vocational training, as well as indicating the length and the date of completion of the training. The 1981 trades certificate data, however, may allow for rough comparisons between 1971 and 1981, particularly when combined with years of non-university education.

Weeks Worked in 1970/1980. Refers to the number of weeks in 1970/1980 during which the population 15 years of age and over, excluding inmates, worked even if for only a few hours. It includes weeks of vacation or sick leave with pay or paid absence on training courses. "Work" excludes housework or other work around the person's home and volunteer work.

La fréquentation est à plein temps si la personne a suivi 75 % ou plus des cours réguliers donnés dans l'année d'études dans laquelle elle était inscrite.

Une erreur systématique de réponse dans les données de 1976 sur la fréquentation scolaire au secondaire, en particulier chez les 15 à 19 ans, empêche de les comparer avec celles de 1981. Toutefois, les données de 1976 sur la fréquentation d'universités et d'établissements d'enseignement postsecondaire non universitaire ne comportent pas ce genre d'erreur.

Sexe. Qualité d'homme ou de femme.

Revenu total. Le revenu total est le revenu en espèces reçu par les personnes de 15 ans et plus durant l'année civile 1970/1980 et provenant d'une ou de plusieurs des sources suivantes: salaires et traitements (avant les retenues pour l'impôt sur le revenu, les cotisations à la sécurité sociale, etc.), le revenu net provenant d'un travail autonome agricole ou non agricole, le revenu de placements (intérêts d'obligations d'épargne et de dépôts bancaires, dividendes, loyers, etc.), les transferts du gouvernement (pensions de sécurité de la vieillesse, allocations familiales, prestations d'assurance-chômage, etc.), les pensions de retraite privées et autres sources de revenu.

Certificats d'écoles de métiers et autres certificats non universitaires. Un certificat d'écoles de métiers s'obtient généralement au terme de plusieurs années de formation à titre d'apprenti dans des métiers comme la soudure, la plomberie ou la menuiserie; il peut également être assorti de périodes de formation scolaire dans des collèges communautaires ou d'autres établissements du même genre. Un certificat ou diplôme d'études non universitaires s'obtient d'un établissement qui ne décerne pas de grade, comme une école d'infirmières, un collège communautaire, un cégep, un institut de technologie, une école de métiers privée ou un collège commercial privé.

En 1971, une série spéciale de questions et de données portaient sur les cours d'apprentissage et la formation professionnelle. En 1981, les données relatives aux diplômes d'écoles de métiers ne peuvent pas être comparées directement avec les données de 1971 sur les cours de formation qui étaient définis comme des cours à plein temps de trois mois ou plus. En outre, dans les données de 1971, on a fait une distinction entre le cours d'apprentissage et la formation professionnelle à plein temps, et on a demandé la durée de la formation et la date où elle avait été terminée. Toutefois, on pourra faire des comparaisons générales entre les données de 1981 sur les certificats d'écoles de métiers et celles de 1971, surtout en les combinant avec les données relatives au nombre d'années d'études non universitaires.

Semaines travaillées en 1970/1980. Nombre de semaines au cours desquelles les personnes de 15 ans et plus, à l'exclusion des pensionnaires d'institution, ont travaillé, ne fût-ce que quelques heures, en 1970/1980. Sont comprises les semaines de vacances payées, de congé de maladie ou d'absences payées pour des cours de formation. Les travaux ménagers ou d'autres travaux effectués à la maison de même que le bénévolat ne sont pas considérés comme du "travail".

Work Activity in 1970/1980. Derived from the number of weeks which a person 15 years of age or over (excluding inmates) worked in 1970/1980 and whether these weeks worked were full-time or part-time.

Year of Immigration.* Refers to the year of first immigration to Canada reported by persons who are not Canadian citizens by birth.

* It should be noted that the question in the 1981 Census addressed a slightly more restricted population (persons not Canadian citizens by birth) than that in 1971 (all persons born outside Canada). Due to processing restrictions, earlier censuses had only pre-defined periods of immigration which made it impossible to determine specific age at and year of immigration.

Years of Other Non-university Education. Refers to the total number of completed years (or less than 1 year of completed courses) of training at non-degree-granting educational institutions other than at the elementary-secondary level.

Schooling in all institutions other than university, secondary or elementary schools is included here, whether or not these institutions require a secondary (high) school certificate for entrance. Leisure or recreation courses are not intended to be included.

CEGEP (general) and CEGEP (professional) courses are both included in this category in 1981.

In addition, university transfer courses of community colleges which in 1976 were intended to be counted at the university level are intended to be indicated at the "Other Non-university" level in 1981. No explicit reference therefore was made to convert "university transfer courses" taken at community colleges to the university level.

In 1971, a special series of questions and data related to Apprenticeship and Vocational Training. The 1981 data for trades certificate are not directly comparable to the 1971 vocational course data which were defined as full-time courses of three months duration or longer. In addition, the 1971 data allowed for the distinction between apprenticeship and full-time vocational training, as well as indicating the length and the date of completion of the training. The 1981 trades certificate data, however, may allow for rough comparisons between 1971 and 1981, particularly when combined with years of non-university education.

Travail en 1970/1980. Indique le nombre de semaines au cours desquelles les personnes de 15 ans et plus, à l'exclusion des pensionnaires d'institution, ont travaillé, en 1970/1980, à plein temps ou à temps partiel.

Année d'immigration*. Indique l'année de la première immigration au Canada déclarée par les personnes qui ne sont pas citoyens canadiens de naissance.

* Il convient de noter que la question de 1981 vise un groupe plus restreint (les personnes qui ne sont pas citoyens canadiens de naissance) que celui de 1971 (toutes les personnes nées à l'extérieur du Canada). À cause des méthodes de traitement utilisées, les réponses possibles aux recensements précédents ont été groupées d'avance par périodes d'immigration de sorte qu'il est impossible d'établir l'âge particulier au moment de l'immigration et l'année de celle-ci.

Nombre d'années d'autres études non universitaires. Nombre total d'années d'études terminées (ou moins d'un an de cours terminés) dans un établissement d'enseignement, autre qu'une école primaire ou secondaire, où des diplômes ne sont pas décernés.

La scolarité reçue dans tout établissement autre qu'une université ou une école primaire ou secondaire, devait être déclarée par les recensés, que l'établissement en cause exige ou non un diplôme d'études secondaires comme condition d'admission. Les personnes qui avaient suivi des cours à titre de passe-temps ou de divertissement ne devaient pas en tenir compte.

Les études faites au cégep, tant du côté général que du côté professionnel, sont incluses dans cette catégorie en 1981.

En outre, les cours préparatoires aux études universitaires dispensés dans les collèges communautaires qui, en 1976, étaient considérés comme étant de niveau universitaire, sont compris dans la catégorie "Autres études non universitaires", en 1981. Ainsi, les recensés n'avaient pas à convertir au niveau universitaire les cours préparatoires suivis dans un collège communautaire.

En 1971, une série spéciale de questions et de données portaient sur les cours d'apprentissage et la formation professionnelle. En 1981, les données relatives aux diplômes d'écoles de métiers ne peuvent pas être comparées directement avec les données de 1971 sur les cours de formation qui étaient définis comme des cours à plein temps de trois mois ou plus. En outre, dans les données de 1971, on a fait une distinction entre le cours d'appentissage et la formation professionnelle à plein temps, et on a demandé la durée de la formation et la date où elle avait été terminée. Toutefois, on pourra faire des comparaisons générales entre les données de 1981 sur les certificats d'écoles de métiers et celles de 1971, surtout en les combinant avec les données relatives au nombre d'années d'études non universitaires.

Province. Refers to the major political division of Canada. From a statistical point of view, it is a basic unit for which data are tabulated and cross-classified. In census publications, provincial tables include the Yukon and Northwest Territories.

Regions. The East refers to Newfoundland, Prince Edward Island, Nova Scotia, and New Brunswick. The West includes Manitoba, Saskatchewan, Alberta, British Columbia, the Yukon and Northwest Territories.

CONFIDENTIALITY AND RANDOM ROUNDING

The figures shown in this report have been subjected to a confidentiality procedure known as "random rounding" to prevent the possibility of associating small figures with any identifiable individual. Under this method, all figures including totals are randomly rounded (either up or down) to a multiple of "5". This technique provides strong protection against direct, residual or negative disclosures without adding significant error to the However, since totals are census data. independently rounded, they do not necessarily equal the sum of individual rounded figures in distributions. Also, minor differences can be expected for corresponding totals and cell values in various census reports. Similarly, percentages, which are calculated on rounded figures, do not necessarily add to the total. Percentage distributions and rates for the most part are based on rounded data, while percentage changes, averages and medians are based on unrounded data. Users are advised that each table is noted accordingly.

SAMPLING AND WEIGHTING

Census data were collected either on a 100% basis (i.e. for all households) or on a sample basis (i.e. from only a random sample of households) with data weighted to provide estimates of the entire population. The information in this report was collected on a 20% sample basis for 1981, 33 1/3% for 1976 and 1971, and weighted up to compensate for sampling. All table headings are noted accordingly.

For any given geographic area, the weighted population, household, dwelling or families, total or subtotal may differ from that shown in reports containing data collected on a 100% basis. Such variation (in addition to the effect of random rounding) will be due to sampling.

Province. Principale division politique du Canada. Du point de vue statistique, c'est une unité de base pour laquelle toutes les données sont totalisées et recoupées. Dans les publications du recensement, les tableaux relatifs aux provinces comprennent le Yukon et les Territoires du Nord-Ouest.

Régions. L'Est fait référence à Terre-Neuve, l'Île-du-Prince-Édouard, la Nouvelle-Écosse et le Nouveau-Brunswick. L'Ouest comprend le Manitoba, la Saskatchewan, l'Alberta, la Colombie-Britannique, le Yukon et les Territoires du Nord-Ouest.

CONFIDENTIALITÉ ET ARRONDISSEMENT ALÉATOIRE

Par souci de confidentialité, les chiffres publiés dans le présent rapport ont subi un arrondissement aléatoire qui supprime toute possibilité d'associer des chiffres à une personne facilement reconnaissable. Grâce à cette méthode, tous les chiffres, y compris les totaux, sont arrondis de façon aléatoire (vers le haut ou vers le bas) jusqu'à un multiple de "5". Cette technique assure une protection efficace contre la divulgation directe, négative ou par recoupements, sans ajouter d'erreur significative aux données. Cependant, comme les totaux sont arrondis séparément, ils ne correspondent pas nécessairement à la somme des chiffres arrondis dans les distributions. De plus, il faut s'attendre que les totaux et les autres chiffres correspondants dans divers bulletins du recensement présentent quelques légères différences. De même, la somme de pourcentages calculés à partir de chiffres arrondis ne correspond pas forcément au total des éléments. Les répartitions en pourcentage et les taux sont dans la plupart des cas basés sur des données arrondies, alors que les variations en pourcentage, les moyennes et les médianes sont basées sur des données non arrondies. Les renvois au bas des tableaux avertissent l'utilisateur en conséquence.

ÉCHANTILLONNAGE ET PONDÉRATION

Les données du recensement ont été recueillies sur une base de 100 % (c'est-à-dire auprès de tous les ménages) ou par un échantillonnage aléatoire des ménages; ces données sont pondérées afin de fournir des estimations sur l'ensemble de la population. Les renseignements figurant dans le présent bulletin ont été recueillis auprès d'un échantillon de 20 % en 1981, 33 1/3% en 1976 et 1971, et pondérés afin de compenser l'effet de l'échantillonnage. Tous les titres des tableaux ont été annotés en conséquence.

Quelle que soit la région géographique, le total ou total partiel pondéré de la population, des ménages, des logements ou des familles peut différer de celui qui figure dans les bulletins de données intégrales. Cet écart (outre l'effet de l'arrondissement aléatoire) sera attribuable à l'échantillonnage.

DATA QUALITY

Introduction

Any census data will be subject to error. Some of the errors will tend to cancel out over a large number of cases (i.e. for larger cells) as errors will be made in both directions (i.e. random errors). In general the proportion or rate of net (i.e. uncancelled) random error increases as the population or cell size decreases. Thus small data values should be used with some caution.

Other errors will tend not to cancel out as they will have a tendency to occur in one direction more than another (systematic errors, for example, question wording which invites errors in one direction more than in the other) and will result in a bias.

The data contained in this bulletin are subject to coverage errors, response errors, processing errors and to sampling errors, in addition to any errors introduced by random rounding.

Coverage Error

A coverage error occurs in the census whenever a person or a household is missed completely or counted more than once. Since overcoverage is expected to be fairly rare in relation to undercoverage, the net effect of such errors is to introduce a downward bias in census figures, so that the published census estimates tend to underestimate the actual population.

A special study was undertaken in relation to the 1981 Census to measure the extent of the bias due to undercoverage. This study estimated the overall undercoverage rate to be of the order of 2% of the total population. It also indicated that undercoverage is higher in certain segments of the population, e.g., young male adults and recent immigrants. Similar trends were obtained in connection with the 1976 Census.

Response Error

A response error occurs when the response recorded is incorrect. Such errors may occur due to the respondent misinterpreting the question, inadvertently checking the wrong box, or even consciously checking the wrong box. Contributing to this error may be the questionnaire wording or organization, or the training and attitude of enumerators.

QUALITÉ DES DONNÉES

Introduction

Dans tout recensement, les données recueillies peuvent être entachées d'erreurs. Certaines de ces erreurs tendent à s'annuler à mesure que le nombre de cas observés augmente (c'est-à-dire dans le cas des classes plus importantes) puisque les erreurs se font dans les deux sens (erreurs aléatoires). De façon générale, la proportion ou le taux d'erreurs aléatoires nettes (c'est-à-dire qui ne se sont pas annulées) augmente au fur et à mesure que la taille de la population ou de la classe diminue. Aussi, faut-il utiliser avec une certaine réserve les petits chiffres obtenus.

Dans d'autres cas, les erreurs ne s'annulent pas parce qu'elles ont tendance à se produire dans un sens plutôt que dans un autre. Il s'agit d'erreurs systématiques. Par exemple, le libellé d'une question peut favoriser les erreurs dans un sens particulier. Ces erreurs entraînent un biais.

Des erreurs d'observation, des erreurs de réponse, des erreurs de traitement et des erreurs d'échantillonnage en plus des erreurs d'arrondissement aléatoire ont pu influer sur la qualité des données fournies dans le présent bulletin.

Erreur d'observation

Il y a erreur d'observation au recensement lorsqu'on oublie complètement une personne ou un ménage ou qu'on le (ou la) compte plus d'une fois. Étant donné qu'on s'attend à ce que le surdénombrement soit assez rare par rapport au sous-dénombrement, de telles erreurs produisent un biais vers le bas dans les statistiques du recensement, de sorte que les estimations publiées du recensement tendent à sous-estimer le chiffre réel de population.

On a entrepris une étude spéciale sur le recensement de 1981 afin d'évaluer le biais entraîné par le sous-dénombrement. Selon les résultats, le taux global du sous-dénombrement serait de 2 % de l'ensemble de la population. L'étude a révélé que le sous-dénombrement est plus élevé dans certains groupes de la population, par exemple chez les jeunes adultes de sexe masculin et les nouveaux immigrants. On avait décelé les mêmes tendances lors du recensement de 1976.

Erreur de réponse

Une erreur de réponse se produit lorsque la réponse enregistrée est incorrecte. De telles erreurs surviennent lorsque le répondant a mal interprété la question ou a coché la mauvaise case par inadvertance ou même volontairement. La formulation des questions ou le mode de présentation du questionnaire ainsi que la formation et l'attitude des agents recenseurs sont des facteurs qui peuvent favoriser ce genre d'erreurs.

Processing Error

Processing errors can occur when write-in answers are coded, when responses on the questionnaire are transcribed to be read by the computer, and when imputations are done either for non-response or for edit rejects.

Sampling Error

Data based upon responses collected on a sample basis and then weighted are subject to error due to the fact that the distribution of characteristics within the sample will not usually be identical to the distribution of characteristics within the population from which the sample has been selected.

The potential error that sampling has introduced will vary according to the relative scarcity of the characteristics in the population. For large cell values the potential error due to sampling, as a proportion of the cell value, will be relatively small. For small cell values this potential error, as a proportion of the cell value, will be relatively large.

'The following table provides approximate measures of the error due to sampling. These measures are intended as a general guide only.

Erreur de traitement

Des erreurs de traitement peuvent se produire lorsque des réponses en toutes lettres sont codées, lorsque les réponses du questionnaire sont transcrites en langage d'ordinateur et lorsqu'on fait des imputations pour tenir compte soit de la non-réponse soit des rejets au contrôle.

Erreur d'échantillonnage

Les données qui sont basées sur les réponses recueillies auprès d'un échantillon et qui sont ensuite pondérées sont sujettes à une erreur vu que la répartition des caractéristiques au sein de l'échantillon n'est habituellement pas identique à la répartition des caractéristiques au sein de la population à partir de laquelle l'échantillon a été prélevé.

L'erreur possible introduite par l'échantillonnage variera en fonction de la rareté relative de la caractéristique au sein de la population. Lorsqu'il y a des cases comportant des chiffres assez grands, l'erreur possible attribuable à l'échantillonnage, en proportion de la valeur de la case, sera relativement petite. Si les valeurs des cases sont petites, cette erreur, en proportion de la valeur de la case, sera toutefois relativement importante.

Le tableau suivant présente une évaluation approximée de l'erreur provenant de l'échantillonnage. Cette évaluation ne devrait servir que de quide.

Table: Approximate Standard Error Due to Sampling for 1971, 1976 and 1981 Census Sample Data

Tableau: Erreur type approximée provenant de l'échantillonnage des données-échantillon du recensement de 1971, 1976 et 1981

| | Cell Value - Valeur des cases | | | | | | | | | | | |
|-----------|-------------------------------|-----|-----|-----|-------|-------|-------|--------|--------|--------|---------|---------|
| | 50 | 100 | 200 | 500 | 1,000 | 2,000 | 5,000 | 10,000 | 20,000 | 50,000 | 100,000 | 500,000 |
| 1971/1976 | 11 | 14 | 21 | 32 | 46 | 64 | 99 | 141 | 198 | 308 | 424 | 919 |
| 1981 | 15 | 20 | 30 | 45 | 65 | 90 | 140 | 200 | 280 | 435 | 600 | 1,300 |

Users wishing to determine the approximate error due to sampling for any given cell of data, based upon the $33\ 1/3\%$ sample in 1971 and 1976, and the 20% sample in 1981, should choose the standard error value in the column of the standard error table whose heading is closest to the value of the given cell in the census tabulation. When using the obtained standard error value, in general the user can be reasonably certain that, for the enumerated population, the true value (discounting all forms of error other than sampling) lies within plus or minus three times the standard error (e.g., for a cell value of 1,000 the range would be $1,000 + \text{or} - 3\times65 \text{ or } 1,000 + \text{or} - 195 \text{ using } 1981 \text{ data}).$

Les utilisateurs qui désirent connaître l'erreur approximée provenant de l'échantillonnage pour une case de données en particulier, d'après l'échantillon de 33 1/3 % en 1971 et 1976, et de 20 % en 1981, n'ont qu'à choisir la valeur de l'erreur type dans la colonne du tableau des erreurs types dont la rubrique est le plus près de la valeur de la case dans la totalisation du recensement. Lorsqu'il utilise la valeur obtenue de l'erreur type, l'utilisateur peut en général être raisonnablement certain que la valeur réelle de la population recensée (si l'on ne tient compte d'aucune forme d'erreur autre que l'échantillonnage) se situera à plus ou moins trois fois l'erreur type (par exemple pour une case dont la valeur est 1,000, l'écart s'étendra de 1,000 + ou - 3X65 ou 1,000 + ou - 195 en ce qui concerne les données de 1981).

The standard errors given in the above table will not apply to population or universe (persons, households, dwellings or families) totals or subtotals for the geographic area under consideration (see Sampling and Weighting above). The effect of sampling for these cells can be determined by comparison with a corresponding 100% bulletin.

The effect of the particular sample design and weighting procedure used in the 1971, 1976 and 1981 Census will vary, however, from one characteristic to another and from one geographic area to another. The standard error values in the above table may, therefore, understate or overstate the error due to sampling. Factors which can be applied as an adjustment to these standard error values for each individual variable may be obtained by contacting the nearest Statistics Canada reference centre (see inside front cover).

Relative to the 1981 Census data, these adjustment factors and additional information on the census methodology - in particular on sampling and weighting - as well as a more comprehensive assessment of the quality of the census data collected on a sample basis will be included in Data Quality - Sample Population (Catalogue No. 99-905).

SPECIAL NOTES

Inmates

Users should note that while some of the foregoing definitions of variables for which data were collected on a sample basis may specifically indicate the exclusion of "inmates", in actual fact, due to processing requirements, this is true of all population based tables in this report, even those involving cross-classification with data collected on a 100% basis (such as mother tongue). Moreover, the total population base for sample data, which can be referred to as the non-inmate population, will not exactly agree with the corresponding 100% figure, again due to a special processing requirement which lowered the final 1981 sample count by some 5,700 persons. Further details on this and any other processing changes affecting data comparability should be contained in Summary Guide - Sample Population (Catalogue No. 99-903) and Data Quality - Sample Population (Catalogue No. 99-905). (See also "Reference Products" section that follows.)

Mobility Status

The geographic areas reflect boundaries as of January 1, 1981 and January 1, 1971, the geographic reference dates for the 1981 and 1971 Censuses of Canada respectively. Even when the geography refers to a previous place of residence (as in the case for out-migrants), it reflects the current boundary at the time of the census.

Les erreurs types données dans le tableau ci-dessus ne s'appliqueront pas aux totaux ou totaux partiels de la population ou de l'univers (personnes, ménages, logements ou familles) de la région géographique à l'étude (voir Échantillonnage et pondération ci-dessus). On peut connaître l'effet de l'échantillonnage sur ces cases en consultant le bulletin correspondant qui présente les données intégrales.

Les répercussions du plan d'échantillonnage et de la procédure de pondération utilisés au recensement de 1971, 1976 et 1981 varieront, cependant, d'une caractéristique à une autre et d'une région géographique à l'autre. Les valeurs de l'erreur type dans le tableau cidessus pourront toutefois surestimer ou sous-estimer l'erreur provenant de l'échantillonnage. Pour obtenir les facteurs qui peuvent servir à rectifier les valeurs de l'erreur type de chaque variable, on peut s'adresser au centre de référence de Statistique Canada le plus proche (voir les renseignements au verso de la couverture avant).

En ce qui a trait aux données du recensement de 1981, ces facteurs de rectification ainsi que des renseignements additionnels sur la méthodologie du recensement (plus particulièrement sur l'échantillonnage et la pondération) et une évaluation plus complète de la qualité des données du recensement recueillies auprès de l'échantillon paraîtront dans le bulletin Qualité des données - Population-échantillon (nº 99-905 au catalogue).

NOTES SPÉCIALES

Pensionnaires d'institution

Bien que certaines des définitions précédentes des variables, pour lesquelles on a recueilli des donnéeséchantillon, indiquent que les "pensionnaires d'institution" sont exclus, en fait, à cause des exigences du traitement, c'est le cas de tous les tableaux du présent bulletin basés sur la population, même de ceux qui affichent des classements recoupés avec des données intégrales (comme celles sur la langue maternelle). De plus, la base de la population totale pour les donnéeséchantillon, que l'on peut désigner comme la population non pensionnaire, ne correspondra pas exactement au chiffre provenant des données intégrales, là encore en raison d'une exigence spéciale au traitement qui, en 1981, a fait baisser le chiffre définitif de quelque 5,700 personnes. Pour plus de détails sur la question ou sur tout autre changement de traitement touchant la comparabilité des données, voir <u>Guide sommaire -</u> <u>Population-échantillon</u> (nº 99-903 au catalogue) et Qualité des données - Population-échantillon (nº 99-905 au catalogue). (Voir également la section des "Produits de référence" qui suit.)

Mobilité

Les limites des régions géographiques sont celles qui s'appliquaient le ler janvier 1981 et le ler janvier 1971, dates de référence géographiques aux fins des recensements du Canada de 1981 et 1971 respectivement. Même quand la région géographique se rapporte au lieu de résidence précédente (comme dans le cas des émigrants internes), il s'agit de ses limites géographiques au moment du recensement.

Not all migrants completed the question on their place of residence five years ago. In previous censuses, there were two levels of non-response: (i) those who failed to report any information (non-response); and (ii) those who gave enough information to establish their province of residence five years ago but not a location at the subprovincial level (partial response). In 1981, because of better geographic controls during processing, complete responses were imputed for these persons eliminating the need for a "not stated" category at the provincial and subprovincial area for place of residence five years ago.

Official Language

The comparability of the 1981 Census Official Language data with those from the 1971 Census is affected by the fact that different processing procedures were applied.

Users should be aware that in 1971, persons who declared an official language as either their home language or their mother tongue were also considered as being able to speak that language, and the response to official language was made to agree. In 1981, this editing convention was maintained only for those who reported an official language as home language.

A major impact of the 1981 processing change, compared to 1971, would appear to be fewer "bilingual" persons and higher numbers of people reporting "neither English nor French".

For example, in Manitoba and Saskatchewan, when 1981 data are compared to 1971 data, figures show a decline in the number of "bilingual" persons. However, when simulations of 1971 processing are applied to the 1981 data, both provinces show an increase in the number of persons able to speak both English and French.

Users should refer to the 1981 Census Dictionary for a basic description of the differences between 1971 and 1981.

Population Born Outside Canada and Immigrant Population

All persons born outside Canada are not necessarily immigrants to Canada. Individuals who have reported their place of birth outside Canada, but who are Canadian citizens by birth, are not considered immigrants to Canada. Consequently, they do not have a period of immigration or an age at immigration when they take up permanent residence in Canada. For the 1981 Census product, these persons were categorized as non-immigrants; they did not have to be granted landed immigrant status before taking up permanent residence in Canada. By contrast, in the 1971 Census, all persons born outside Canada were categorized as immigrants and were required to respond to the question on period of immigration.

Les migrants n'ont pas tous répondu à la question sur leur lieu de résidence cinq ans auparavant. Aux recensements antérieurs, on a observé deux niveaux de non-réponse, soit: (i) le cas des répondants qui n'avaient fourni aucun renseignement (non-réponse); et (ii) le cas de ceux qui avaient fourni assez de détails pour que l'on puisse déterminer quelle était leur province de résidence cinq ans auparavant, mais sans précision au niveau infraprovincial (réponse partielle). En 1981, grâce à un contrôle plus rigoureux des données géographiques lors du dépouillement, des réponses complètes furent imputées à ces deux catégories de personnes; il n'a donc pas été nécessaire d'établir une catégorie "non déclarée" aux niveaux provincial et infraprovincial pour le lieu de résidence cinq ans auparavant.

Langue officielle

La comparabilité des données du recensement de 1981 sur la langue officielle avec celles de 1971, est affectée par le fait que différentes procédures de traitement de données ont été appliquées.

Les utilisateurs doivent savoir qu'en 1971, les personnes qui ont déclaré une langue officielle comme langue maternelle ou langue parlée à la maison étaient considérées comme étant capables de parler cette langue, et la réponse sur la langue officielle était ajustée en conséquence. En 1981, cette procédure n'a été utilisée que pour les personnes qui indiquaient une langue officielle comme langue parlée à la maison.

Le changement dans les procédures de traitement de 1981 comparées à 1971, a occasionné une diminution du nombre de personnes "bilingues" et un nombre plus élevé de réponses dans la catégorie "ni anglais, ni français".

Par exemple, au Manitoba et en Saskatchewan, lorsque les données de 1981 sont comparées avec celles de 1971, les résultats indiquent un déclin du nombre de personnes "bilingues". Toutefois, lorsque les procédures de 1971 sont appliquées aux données de 1981, ces deux provinces enregistrent une augmentation du nombre de personnes capables de parler l'anglais et le français.

Les utilisateurs doivent se reporter au <u>Dictionnaire</u> du recensement de 1981 pour obtenir des indications sur les changements intervenus entre 1971 et 1981.

Personnes nées en dehors du Canada et immigrants

En effet, les personnes qui ont indiqué être nées en dehors du Canada mais qui sont maintenant des citoyens canadiens de naissance ne sont pas considérées comme des immigrants au Canada. Par conséquent, elles n'ont pas à déclarer l'année d'immigration ou leur âge à l'immigration lorsqu'elles s'établissent au Canada de façon permanente. Dans les statistiques du recensement de 1981, ces personnes ont été classées dans la catégorie des non-immigrants; elles n'ont pas à obtenir le statut d'immigrant reçu pour être autorisées à s'installer en permanence au Canada. Par contre, au recensement de 1971, toutes les personnes nées en dehors du Canada ont été classées comme immigrants et ont dû répondre à la question sur l'année d'immigration.

The refinement introduced in 1981, to incorporate citizenship at birth and to distinguish between Canadians by birth who had a place of birth outside Canada and persons who immigrate to Canada, thus affects the comparability of data from the two censuses. While the regular census outputs only provide data on the immigrant population who had a place of birth outside Canada, the 1981 Census also recognizes that some persons born inside Canada may be classified as immigrants because they reported a year of immigration.

Schooling Data(4)

Comparisons of the 1981 Census schooling data with past censuses or with other sources should generally be restricted to uniform characteristics, and to similar temporal and population components. General comparisons that are made should take note of the fact that the 1981 schooling data, in contrast to that for previous census years, exclude inmates of institutions, and are reported only for the population 15 years and over, in contrast with 1971 and earlier censuses which reported schooling figures for the population 5 years and over. More specifically, there is one main aspect of the 1981 schooling data which distinguishes it from other sources.

The main aspect of the 1981 Census schooling data where comparability is affected is in the "other non-university education" category. The other non-university education concept differs from previous censuses and from other measures of the so-called postsecondary non-university concept in two respects. First, in contrast to the 1976 Census, this question now relates to all university transfer courses of community colleges, and the CEGEP general of Quebec; therefore, a shift in the data from university to non-university can be expected and does indeed occur between 1976 and 1981 (especially for the CEGEP population). Second, the 1981 question has been broadly conceptualized to encompass all non-university schooling beyond elementary or secondary, regardless of secondary school graduation. The 1981 other non-university education concept covers a broad spectrum of schooling that includes the conventional postsecondary areas as well as other training in the trades and vocational areas.

Comparability of Labour Force Activity Data

Differences between the 1971, 1976, and 1981 Census definitions of "employed", "unemployed" and "not in the labour force" must be taken into consideration when making comparisons. Where possible, adjustments were made to the data to eliminate these differences.

(4) This note applies to previously published education data. It has been included for purposes of comparing the current historical bulletin data with these other sources.

La modification apportée en 1981, laquelle visait à connaître la citoyenneté à la naissance et à faire la distinction entre les Canadiens de naissance qui sont nés en dehors du Canada et les immigrants au Canada, influe sur la comparabilité des données de ces deux recensements. Bien que les produits réguliers de recensement ne présentent que des données sur les immigrants qui sont nés en dehors du Canada, le recensement de 1981 admet que certaines personnes nées au Canada puissent être classées comme immigrants parce qu'elles ont indiqué une année d'immigration.

Données sur la scolarité(4)

Les comparaisons des données du recensement de 1981 sur la scolarité avec celles des recensements antérieurs ou d'autres sources doivent généralement se limiter à des caractéristiques uniformes et aux mêmes composantes temporelles et démographiques. Pour les comparaisons générales, il convient de noter que les données de 1981 sur la scolarité, contrairement à celles des recensements antérieurs, ne comprennent pas les pensionnaires d'institution et ne visent que la population de 15 ans ou plus alors qu'aux recensements de 1971 et des années précédentes, les données sur la scolarité existaient pour la population de 5 ans ou plus. Il y a en outre un aspect essentiel qui distingue les données de 1981 de celles provenant d'autres sources.

Cet aspect essentiel se retrouve dans la catégorie des "autres études non universitaires" utilisée au recensement de 1981. Le concept des autres études non universitaires diffère, à deux égards, des recensements antérieurs et des autres mesures du concept "niveau postsecondaire non universitaire". Premièrement. contrairement au recensement de 1976, cette expression désigne maintenant tous les programmes de passage à l'université des collèges communautaires et le programme général des cégeps du Québec; on peut donc s'attendre à ce que les données portent non plus sur les études universitaires mais sur les études non universitaires, et c'est ce qui arrive entre 1976 et 1981 (surtout pour la population des cégeps). Deuxièmement, la question posée au recensement de 1981 englobait toutes les études non universitaires après le niveau élémentaire ou secondaire, peu importe que la personne ait obtenu son diplôme d'études secondaires ou non. Le concept des autres études non universitaires de 1981 a un sens large qui regroupe les études postsecondaires traditionnelles ainsi que la formation professionnelle et technique (métiers).

Comparabilité des données sur l'activité

Lorsque l'on compare les données sur l'activité tirées des recensements de 1971, 1976 et 1981, il faut tenir compte des différences qui existent entre les diverses définitions des "personnes occupées", des "chômeurs" et des "inactifs". Dans la mesure du possible, les données ont été corrigées afin d'éliminer ces différences.

(4) Cette note s'applique aux données sur l'éducation publiées antérieurement. Elle est présentée ici pour permettre la comparaison des données de ce bulletin chronologique à celles provenant d'autres sources.

In 1976 and 1981, questions were asked to determine whether a person had a "new job" to start in the future and whether a person was available to start work in the reference week. These questions affect the derivation of the unemployed category. Since no similar questions were asked in 1971, the responses to these questions in 1976 and 1981 were ignored when data were being produced for this bulletin which is based on the 1971 definition.

In 1971 persons who were both looking for work and absent from their job were considered unemployed rather than employed because the looking for work response took precedence. In 1976 and 1981 the reverse was true. To be comparable the 1971 priority was used in this bulletin.

In 1971 and 1976, inmates of institutions were asked the labour force questions. However, during processing their responses were ignored and they were included in the not in the labour force category. In 1981 inmates were not asked the labour force activity questions and thus were not assigned a labour force classification. In this bulletin, only the non-inmate population is used for 1971, 1976 and 1981 data.

No adjustments were made for certain differences in definition. Data users should take note of these differences when using the time series data found in this bulletin.

In 1981, the "employed" category included women working less than 20 hours a week without pay on a family farm. In 1971 most of these women had been classified as "not in the labour force". Only the 1976 data were adjusted to the 1971 definition because the 1981 data underestimated this group.

In 1981 the reference period for the "lay-off" question was increased to 26 weeks from the 30 day period used in 1976 and 1971. Moreover, the reference period for the "looking for work" question was changed from "last week" in 1971 and 1976 to "during the last four weeks" in 1981.

Income Data

Average income of population 15 years and over is calculated for persons with income only. Aggregate income calculated from these data should be used with caution as averages were calculated prior to rounding.

The total income concept used in the 1981 Census is identical to that used in the 1971 Census. However, the 1971 Census provides total income data on all individuals 15 years and over, while the 1981 Census excluded from the income sample the inmates of institutions.

En 1976 et 1981, on a demandé aux recensés s'ils avaient un "nouvel emploi" devant débuter à une date ultérieure et s'ils étaient prêts à commencer à travailler dans la semaine de référence. Ces questions influent sur la taille de la catégorie des chômeurs. Puisque aucune question semblable n'a été posée en 1971, les données obtenues en réponse à ces questions en 1976 et 1981 ne sont pas prises en compte dans la présente publication qui est fondée sur la définition de 1971.

En 1971, les personnes qui étaient à la fois à la recherche d'un emploi et absentes de leur travail étaient considérées comme des "chômeurs" et non comme des "personnes occupées" parce qu'on avait retenu la recherche d'emploi comme critère principal. En 1976 et 1981, c'est l'inverse qui s'est produit. Pour faciliter la comparaison des données, nous avons utilisé le critère de 1971 dans le présent bulletin.

En 1971 et 1976, on a interrogé les pensionnaires d'institution sur leur activité. Cependant, au moment du traitement des données, leurs réponses n'ont pas été prises en compte et ils ont été classés dans la catégorie des "inactifs". En 1981, les questions sur l'activité ne leur ont pas été posées et ils n'ont donc pas été classés selon leur activité. Dans le présent bulletin, les données de 1971, 1976 et 1981 ne visent que la population hors institution.

Il nous a été impossible d'apporter les corrections nécessaires pour compenser toutes les autres différences de définition. Les utilisateurs sont priés de garder ces différences à l'esprit lorsqu'ils consultent les données chronologiques présentées ici.

En 1981, la catégorie des "personnes occupées" comprenait les femmes qui travaillaient moins de 20 heures par semaine sans rémunération dans une ferme familiale. En 1971, la plupart de ces femmes avaient été classées parmi les "inactifs". Seules les données de 1976 ont été ajustées en fonction des définitions de 1971 parce que les données de 1981 sous-estimaient ce groupe.

En 1981, la période de référence adoptée pour la question sur les "mises à pied" est passée à 26 semaines; elle était de 30 jours en 1976 et 1971. Par ailleurs, en 1981, la période de référence retenue pour la question sur la "recherche d'emploi" représentait les "quatre dernières semaines"; en 1971 et 1976, elle correspondait à "la semaine dernière".

Données sur le revenu

Le revenu moyen de la population de 15 ans et plus est calculé uniquement pour les personnes ayant déclaré un revenu. Il faut utiliser avec prudence le revenu agrégé établi à l'aide de ces données, car les moyennes ont été calculées avant l'arrondissement.

Le concept du revenu total utilisé au recensement de 1981 est identique à celui qui avait servi au recensement de 1971. Cependant, le recensement de 1971 fournit des données sur le revenu total pour toutes les personnes de 15 ans et plus, alors que le recensement de 1981 n'a pas pris en compte les pensionnaires d'institution dans l'échantillon sur le revenu.

The income size distributions by various characteristics for population 15 years and over, census families, non-family persons, economic families, unattached individuals and private households in Canada and the provinces are published in separate reports.

Census income statistics are subject to sampling variability. Although such sampling variability may be quite small for large population groups, its effects cannot be ignored in the case of very small subgroups of population in an area or in a particular category. This is because, all other things being equal, the larger the sample size, the smaller is the error. However, where statistics are based on relatively small totals, the readers are strongly advised to exercise caution in the use and interpretation of these statistics.

REFERENCE PRODUCTS

The 1981 Census Dictionary (Catalogue No. 99-901) contains the complete range of definitions for all variables and terms used in the 1981 Census data products. Of general interest would be information contained in Summary Guide - Total Population (Catalogue No. 99-902) and Summary Guide - Sample Population (Catalogue No. 99-903) which include reproductions of the census questionnaire forms and basic indicators of data quality. Further details on the data quality may be obtained from Data Quality - Total Population (Catalogue No. 99-904) and Data Quality - Sample Population (Catalogue No. 99-905).

A wide range of other analytical and reference products are available and described, along with information on data products and available services, in Products and Services of the 1981 Census of Canada.

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- -- amount too small to be expressed.

Note: The tables presented in this bulletin were selected on the basis of: (i) portraying the main dimensions of level of schooling and of school attendance for 1971, 1976 and 1981 at the national and provincial levels; and (ii) the historical comparability of selective cross-tabulations of schooling and other related socio-economic variables. Other census variables not selected for presentation either were difficult to deal with on an historical basis, or were not considered to be directly related to education.

Nous publions dans des bulletins distincts des répartitions du revenu selon diverses caractéristiques pour la population de 15 ans et plus, les familles de recensement, les personnes hors famille, les familles économiques, les personnes seules et les ménages privés au Canada et dans les provinces.

Les statistiques sur le revenu tirées du recensement sont sujettes à la variabilité d'échantillonnage. Bien qu'elle puisse être très petite pour les groupes importants de population, on ne peut en ignorer les répercussions dans le cas des très petits sous-groupes de population situés dans une région ou une catégorie particulière. En effet, toutes choses étant égales par ailleurs, plus grand sera l'échantillon, plus petite sera l'erreur. Cependant, lorsque des statistiques sont basées sur des totaux relativement petits, nous conseillons fortement au lecteur de se montrer prudent dans l'emploi et l'interprétation de ces statistiques.

PRODUITS DE RÉFÉRENCE

Le <u>Dictionnaire du recensement de 1981</u> (nº 99-901 au catalogue) donne les définitions de toutes les variables et de tous les termes utilisés dans les produits du recensement de 1981. Les renseignements que renferment le <u>Guide sommaire - Population totale</u> (nº 99-902 au catalogue) et le <u>Guide sommaire - Population-échantillon</u> (nº 99-903 au catalogue), présentent un intérêt général puisqu'ils donnent une reproduction des questionnaires du recensement et les indicateurs de base de la qualité des données. On peut obtenir plus de détails sur la qualité des données dans Qualité des données - Population totale (nº 99-904 au catalogue) et <u>Qualité des données - Population-échantillon</u> (nº 99-905 au catalogue).

La publication Produits et services du recensement du Canada de 1981 décrit une foule d'autres analyses et de produits de référence, et fournit des renseignements sur les produits et services disponibles.

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- -- nombres infimes.

Nota: Les tableaux présentés dans ce bulletin ont été choisis parce qu'ils: (i) présentaient les principaux aspects du niveau de scolarité et de la fréquentation scolaire pour 1971, 1976 et 1981 aux niveaux national et provincial; et (ii) permettaient la comparabilité chronologique de certains tableaux croisés sur l'éducation et d'autres variables socio-économiques pertinentes. Les variables du recensement qui n'ont pas été choisies à cette fin, se prêtaient mal à une manipulation chronologique ou ne présentaient pas de lien direct avec l'éducation.

Users who require more detailed disaggregations should contact: Census Customer Services Section, 2 D-2 Jean-Talon Building, Statistics Canada KIA 0T6 (995-2411). For further information on the tables included in this bulletin, users should contact: G.A. Mori or M.E. Lalonde, Housing, Family and Social Division, 4 B-1 Jean-Talon Building, Statistics Canada KIA 0T6 (995-7946).

Les utilisateurs qui désirent des ventilations plus détaillées sont priés de s'adresser à la Section du serviceclients du recensement, 2 D-2, immeuble Jean-Talon, Statistique Canada K1A 0T6 (995-2411). Pour obtenir de plus amples renseignements sur les tableaux du présent bulletin, veuillez vous adresser à G.A. Mori ou M.E. Lalonde, Division des caractéristiques sociales, du logement et des familles, 4 B-1, immeuble Jean-Talon, Statistique Canada K1A 0T6 (995-7946).

 1 In 1971, postsecondary referred to years of university attended, and to other years of schooling attended since secondary school.

In 1976, postsecondary referred to years of university completed and to years of postsecondary non-university completed. Examples of the latter include teacher's college, nursing school, community college (vocational and technical) and CEGEP (professional).

In 1981, postsecondary referred to years of schooling completed at university and at institutions other than university, secondary (high) or elementary school. Examples of the latter include community colleges, institutes of technology, CEGEPs (general and professional) private trade schools, private business colleges and diploma schools of nursing. Also in 1981, the designation postsecondary non-university has been referred by the term other non-university.

1 En 1971, "scolarité postsecondaire" désignait les années d'études universitaires et les autres années de scolarité après les études secondaires.

En 1976, "scolarité postsecondaire" désignait les années d'études universitaires terminées ainsi que les années d'études postsecondaires non universitaires terminées; dans ce dernier cas, il s'aqit, par exemple, des années passées dans une école normale, une école de sciences infirmières, un collège communautaire (professionnel et technique) ou dans un cégep (enseignement professionnel).

En 1981, "scolarité postsecondaire" désignait les années d'études universitaires terminées ainsi que les années de scolarité terminées dans un établissement autre qu'une université, une école secondaire ou une école primaire, par exemple, un collège communautaire, un institut de technologie, un cégep (enseignement général et professionnel), une école de métiers privée, un collège commercial privé ou une école de sciences infirmières décernant un diplôme. En 1981, l'expression "postsecondaire non universitaire" a été remplacée par "autres études non universitaires".

¹ The counts for this category in 1971 were in all likelihood overestimated due to the inclusion of a number of non-university certificates.

¹ Les chiffres pour cette categorie, en 1971, étaient en toute probabilité surestimés étant donné qu'ils comprenaient un certain nombre de certificats non universitaires.

² The 1971 Census "bachelor degree" category includes persons who reported "first professional degree". There is possibility of an overestimate for this latter category, particularly in the province of Quebec where the term "premier diplôme permettant d'exercer une profession" may not have been correctly interpreted by a small portion of respondents.

The 1976 and 1981 Census "bachelor degree" category includes persons who reported a degree in medicine. In 1981 the medical degree category included degrees in optometry. The 1981 Census "bachelor degree" category also includes persons who reported "university certificate above the bachelor level".

² La catégorie "baccalauréat" du recensement de 1971 comprend les personnes qui ont indiqué "premier diplôme permettant d'exercer une profession". Il existe une possibilité de surestimation en ce qui a trait à cette dernière catégorie, surtout au Québec où le terme "profession" peut ne pas avoir été bien interprété par une petite proportion de répondants.

La catégorie "baccalauréat" des recensements de 1976 et 1981 comprend les personnes qui ont indiqué un "diplôme en médecine". En 1981 la catégorie des "diplômes en médecine" comprenait les diplômes en optométrie. La catégorie "baccalauréat" du recensement de 1981 comprend également les personnes qui ont indiqué "certificat ou diplôme universitaire supérieur au baccalauréat".

13-579

Table 3. Population 15 Years and Over by Years of Other Non-university Education, Highest Grade of Elementary-secondary and Trades/Vocational Certificate Showing Selected Age Groups and Sex, for Canada and Regions, 1971 and 1981

(Rased on sample data)

¹ In 1971, postsecondary referred to years of university attended, and to other years of schooling attended since secondary school.

In 1976, postsecondary referred to years of university completed and to years of postsecondary non-university completed. Examples of the latter include teacher's college, nursing school, community college (vocational and technical) and CEGEP (professional).

In 1981, postsecondary referred to years of schooling completed at university and at institutions other than university, secondary (high) or elementary school. Examples of the latter include community colleges, institutes of technology, CEGFPs (general and professional) private trade schools, private business colleges and diploma schools of nursing. Also in 1981, the designation postsecondary non-university has been referred by the term other non-university.

En 1976, "scolarité postsecondaire" désignait les années d'études universitaires terminées ainsi que les années d'études postsecondaires non universitaires terminées; dans ce dernier cas, il s'agit, par exemple, des années passées dans une école normale, une école de sciences infirmières, un collège communautaire (professionnel et technique) ou dans un cégep (enseignement professionnel).

En 1981, "scolarité postsecondaire" désignait les années d'études universitaires terminées ainsi que les années de scolarité terminées dans un établissement autre qu'une université, une école secondaire ou une école primaire, par exemple, un collège communautaire, un institut de technologie, un céque (enseignement général et professionnel), une école de métiers privée, un collège commercial privé ou une école de sciences infirmières décernant un diplôme. En 1981, l'expression "postsecondaire non universitaire" a été remplacée par "autres études non universitaires".

¹ En 1971, "scolarité postsecondaire" désignait les années d'études universitaires et les autres années de scolarité après les études secondaires.

¹ In 1971, postsecondary referred to years of university attended, and to other years of schooling attended since secondary school.

In 1981, postsecondary referred to years of schooling completed at university and at institutions other than university, secondary (high) or elementary school. Examples of the latter include community colleges, institutes of technology, CEGEPs (general and professional) private trade schools, private business colleges and diploma schools of nursing. Also in 1981, the designation postsecondary non-university has been referred by the term other non-university.

¹ En 1971, "scolarité postsecondaire" désignait les années d'études universitaires et les autres années de scolarité après les études secondaires.

En 1981, "scolarité postsecondaire" désignait les années d'études universitaires terminées ainsi que les années de scolarité terminées dans un établissement autre qu'une université, une école secondaire ou une école primaire, par exemple, un collège communautaire, un institut de technologie, un cétage (enseignement général et professionnel), une école de métiers privée, un collège commercial privé ou une école de sciences infirmières décernant un diplôme. En 1981, l'expression "postsecondaire non universitaire" a été remplacée par "autres études non universitaires".

¹ Excludes unemployed persons 15 years and over who have never worked or who had worked only prior to January 1, 1970 or January 1, 1980, as applicable. "Labour force and occupation" for 1981 have been defined in terms of 1971 to be as comparable as possible. The data will differ slightly from those defined on a 1981 basis.

¹ Ne comprend pas les personnes en chômage de 15 ans et plus qui n'ont jamais travaillé ou ont travaillé seulement avant le 1^{er} janvier 1970 ou le 1^{er} janvier 1980, selon le cas. "Population active et profession" pour 1981 ont été définies en fonction de 1971 de façon à être aussi comparables que possible. Ces données différeront quelque peu de celles définies sur la base de 1981.

| Industry unspecified or undefined – Activités indéterminées ou imprécises | 9.5 | 9.8 | 10.4 | 10.9 | 8.2 | 6.5 | | |

^{*} Median less than 5 years of schooling - Médiane moins de 5 années de scolarité.

¹ Excludes unemployed persons 15 years of age and over, who have never worked or who had worked only prior to January 1, 1970 or January 1, 1980, as applicable. The 1981 labour force has been defined to be as comparable as possible with that of the 1971 Census. The industry division totals do not include the imputations for the "Not stated"; these are shown as one group in accordance with the 1971 practice. Data will therefore differ slightly from those defined on a 1981 basis.

¹ Ne comprend pas les châmeurs de 15 ans et plus qui n'ont jamais travaillé ou ont travaillé seulement avant le 1^{er} janvier 1970 ou le 1^{er} janvier 1980, selon le cas. La population active pour 1981 a été définie de façon à la rendre aussi comparable que possible à celle de 1971. Les totaux des divisions d'activité économique ne comprennent pas les imputations aux "non déclarés"; ceux-ci sont regroupés dans une catégorie comme on l'avait fait en 1971. Ces données différeront donc quelque peu de celles qui sont définies sur la base de 1981.
